## Sampling

### SAMPLING PROCEDURE

GYTS uses a global standardized methodology that includes a two-stage sample design with schools selected with a probability proportional to enrollment size. The classes within selected schools are chosen randomly and all students in selected classes are eligible to participate in the survey.

A total of 890 students aged 13-15 participated in the East Timor GYTS.

### RESPONSE RATE

The school response rate was 96.0%, the class response rate was 100.0%, the student response rate was 80.5%, and the overall response rate was 77.3%.

### WEIGHTING

The weighting formula used is:

$$W = W1 * W2 * f1 * f2 * f3 * f4$$

The list below shows what each variable in the formula represents.

W1 - The inverse of the probability of selecting the school

W2 - The inverse of the probability of selecting the class within the school

f1 - a school-level nonresponse adjustment factor calculated by school size category (small, medium, large)

f2 - a class adjustment factor calculated by school

f3 - a student-level nonresponse adjustment factor calculated by class

f4 - a post stratification adjustment factor calculated by gender and grade
