Acknowledgment

The fieldwork for this survey couldn't be success without the kind reception and full cooperation of the targeted households. The PCBS expresses its gratitude to all of them and appreciates their commitment to bringing this achievement into light.

Financial support for the Labour Force Services Survey at the PCBS is being provided by the Palestinian National Authority (PNA) and the Core Funding Group (CFG) represented by The Representative Office of Norway to the PNA; The Representative Office of Netherland to PNA; Swiss Agency for Development and Cooperation (SDC); UK Depatment for International Development (DFID); The European Commission (EC); and The World Bank (WB).

PCBS extends special thanks to the Core Funding Group (CFG) for this support.

Notes for Users

1. The Palestinian Territory were diversified into a group of administrative parts, for dissemination purposes, grouping of districts to Governorates and Governorates to another as follows: Jenin & Tubas district, Tulkarm & Qalqiliya, Nablus & Salfit district, Bethlehem & Jericho, no change on other Governorates.
2. A comprehensive revision for the sample weights has been made, **using the revised population projections 2005**, and the demographic structure of the population; distribution by age and sex, in addition to distribution according to place of residence.
3. (-) in tables means observations are too small.

Preface

The Palestinian Central Bureau of Statistics is pleased to present the ninth annual report on the Palestinian Labour Force Survey Programme. This programme consists of an integrated series of labour force surveys, the first one issued in October 1995. The Palestinian Labour Force Survey Programme conducts surveys quarterly.

The main objective of collecting data on the Palestinian labour force including components of employment, unemployment and underemployment, is to provide basic information on the relative size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in employment. These data supported with information on other aspects of the economy provide a basis for the evaluation and analysis of macro-economic policies.

This report provides data on labour force, covering standard classifications, economic activity, occupation, employment status, and other related variables, as well as the demographic characteristics of the work force (population aged 15 years and above).

We hope that this report will provide Palestinian planners, researchers and decision makers with revised and accurate statistical data on the Palestinian labour market.

Executive Summary

The Palestinian Central Bureau of Statistics started conducting a continuous labour force household survey since October 1995. By the end of 2004, 35 rounds of labour force survey has been conducted on a seasonal bases except the first two rounds that was conducted biannually.

The main objective of collecting data on the labour force and its components, including employment, unemployment and underemployment, is to provide basic information on the size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in the employment situation. These data, supported with information on other aspects of the economy, provide a basis for the evaluation and analysis of macro-economic policies.

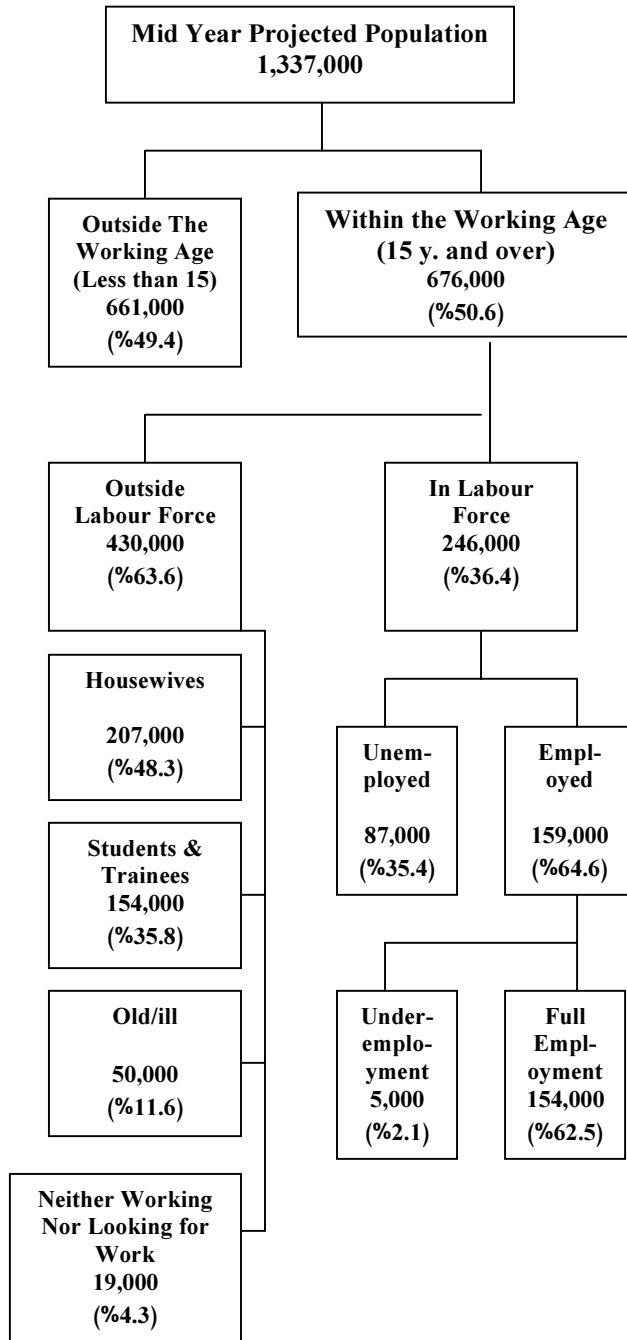

This report focuses mainly on labour force key indicators, main characteristics of the employed, unemployed, underemployed and persons outside labour force, labour force according to level of education, distribution of the employed population by occupation, economic activity, place of work, employment status, hours and days worked and average daily wage in NIS for the employees.

Labour Force Status:

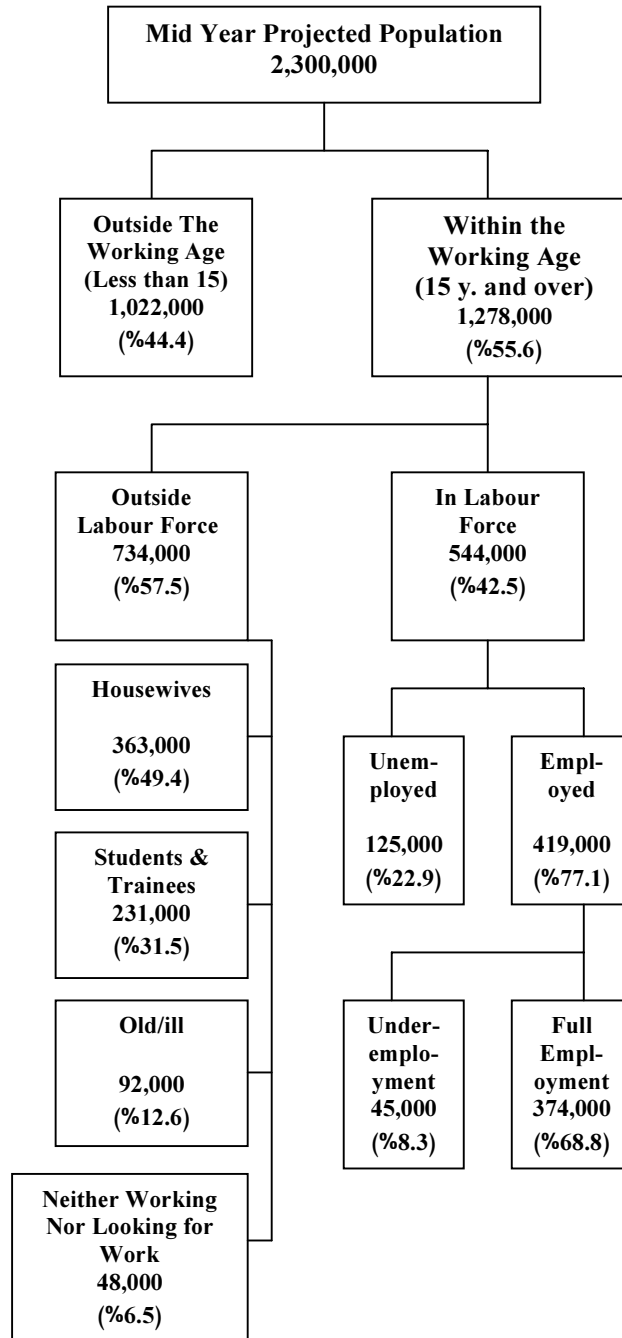

Labour force survey witnessed different phases of the Palestinian economy due to unstable political situation and the strict imposed closure on the Palestinian situation, where the impact of these conditions on labour force was clearly reflected negatively on the different labour force components sine September 2000.

Labour force survey showed that participation rate decreased from 41.5% in 2000 to 40.4% in 2004, and unemployment rate increased sharply from 11.8% in 1999 to 14.1% in 2000 to reach 26.8% in 2004. The following diagram presents the status of the major compment of labour force in the Palestinian Territory in 2004.

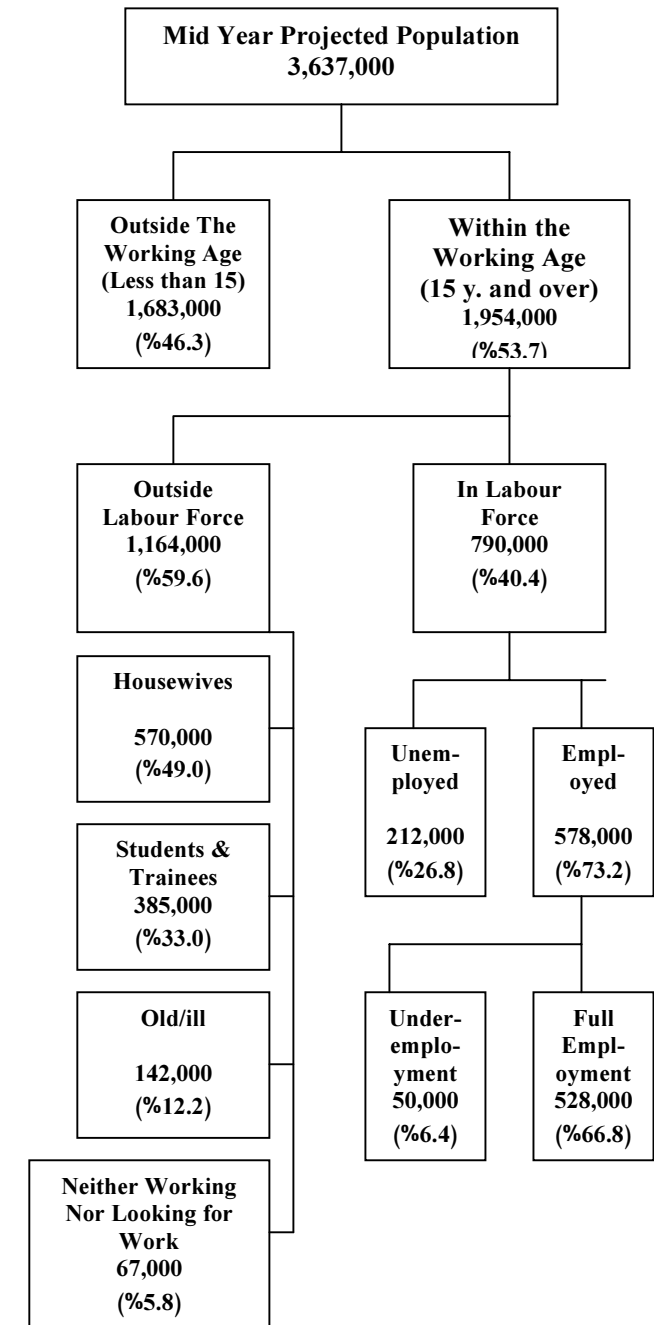

Labour Force Framework in GS: 2004

Labour Force Framework in WB: 2004

Labour Force Framework in PT: 2004

Note: Full Employment and Underemployment are the percentages out of the total Labour Force

Chapter One

Introduction

1.1 Survey Objectives:

The main objective of collecting data on the labour force and its components, including employment, unemployment and underemployment, is to provide basic information on the size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in the employment situation. These data, supported with information on other aspects of the economy, provide a basis for the evaluation and analysis of macro-economic policies.

1.2 Report Structure:

This report consists of five chapters. The first chapter presents a background on the labour force survey programme and survey objectives. The second chapter presents the main definitions used in developing the questionnaire and other research tools, in addition to data collection and tabulation. The third chapter presents the main findings: labour force key indicators, main characteristics of the employed, unemployed, underemployed and persons outside labour force, labour force according to level of education, distribution of the employed population by occupation, Economic Activity, place of work, employment status, hours and days worked and average daily wage in NIS for the employees.

The fourth chapter discusses the methodology used in the survey, including questionnaire design, sampling frame, sample design and sample weights calculations. This chapter also describes the recruitment and training of interviewers and supervisors, fieldwork operations, data processing, coding and editing after data entry and tabulation.

The fifth chapter includes a descriptive assessment of data quality, including non-response rate and its components.

Chapter Two

Concepts and Definitions

This chapter presents the main concepts and definitions used in the survey. These concepts are based on the international standards taking into account the Palestinian labour market's circumstances.

Household:

One person or a group of persons living together who make common provision for food or other essentials for living. Household members may be related, unrelated, or combination of both.

Population of Working Age:

All persons in the West Bank and Gaza Strip aged 15 years and over.

Reference Week:

The week ending on Friday preceding the interviewer's visit to the household.

Work:

Includes any activity for wage or salary, for profit or family gain, in cash or in kind. One hour or more of such activity constitutes work. Work also includes unpaid activity on a family farm or business.

Employed:

All persons are 10 years and over who were at work at least one hour during the reference week, or who were not at work during the reference week, but held a job or owned business from which they were temporarily absent (because of illness, vacation, temporarily stoppage, or any other reason). Employed persons are classified according to employment status as follows:

1. Employer:

A person who operates his or her own economic enterprise or engages independently in a profession or trade, and hires one or more wage employees.

2. Own-account worker (self-employed):

A person who operates his or her own economic enterprise or engages independently in a profession or trade, and hires no employees.

3. Employee:

A person who works for a public or private employer and receives remuneration in wage, salary, commission, tips, piece-rates or pay in kind.

4. Unpaid family member:

A person who works without pay in an economic enterprise operated by a related person living in the same household.

Unemployed (According to the ILO Standards):

Unemployed persons are those individuals 15 years and over who did not work at all during the reference week, who were not absent from a job and were available for work and actively seeking a job during the reference week. Persons who work in Israel and were absent from work due to closure are considered unemployed, and also those persons never work and not looking for work but waiting to return back to their works in Israel and Settlements.

Unemployed (According to the Relaxed Definition):

The Number Of Unemployed Persons was calculated under the definition by adding to unemployed Persons according to the ILO Standards, those Persons outside labour force because they were frustrated.

Labour Force:

The economically active population (Labour Force) consists of all persons 15 years and over who are either employed or unemployed as defined over at the time of survey.

Underemployment:

Underemployment exists when a person's employment is inadequate in relation to alternative employment, account being taken of his\her occupational skills. The underemployed persons are classified into two groups:

1. Visible Underemployment:

Visible underemployment refers to insufficient volume of employment:

persons worked less than 35 hours during the reference week or worked less than the normal hours of work in their occupation were considered as visibly underemployed.

2. Invisible Underemployment:

Invisible underemployment refers to a misapplication of labour resources or fundamental imbalance as between labour and other factors of production, such as insufficient income, underutilization, or bad conditions of the current work, or other economic reasons. In this survey, employed persons are classified as invisibly underemployed if they are not already classified as visibly underemployed; and want to change their jobs because of an insufficiency of income, or because they are working in an occupation which does not correspond to their qualification.

Main Job:

The job at which the person usually works the most hours in his\her main job. If a person usually works the same number of hours at two jobs, the "main" job is the job at which the person has been employed the longest.

Full Time Job:

Any job that is usually performed for 35 hours or more per week is considered full-time. In some occupations, usual weekly schedules of less than 35 hours per week are considered to be full-time. For these cases, the option "normal hours are full time" is provided.

Part Time Job:

A job in which a person works less than 35 hours, unless the number of usual work hours is less than 35. In addition, a job is a part time job if the hours worked by a person were less than usual work hours in such job.

Occupation:

Occupation refers to the kind of work done during the reference period by the employed person, or the kind of work done previously if unemployed, irrespective of the Economic Activity or the employment status of the person. Occupations are grouped together mainly on the basis of the similarity of skills required to fulfill the tasks and duties of the job. Occupations are classified according to the International Standard Classification of Occupation (ISCO 1988).

Economic Activity:

Economic Activity refers to the activity of the establishment in which an employed person worked during the reference period, or last worked if unemployed. This activity is defined in terms of the kind of goods produced or services supplied by the unit in which the person works. Economic Activity activities are classified according to the unified commodity classification in the West Bank and Gaza Strip which is based on the International Standard Classification of All Economic Activities (ISIC Rev3).

Absent from Usual Work:

All those who were absent from their usual work during the reference week, due to illness, holiday, strike, curfew, lock-out, temporary work stoppage, or due to some other reasons.

Seeking Work:

Seeking work is defined as having taken specific steps in the reference week to find paid employment or self-employment. Job seekers are classified into:

1. Available for work: A person ready to work if he\she is offered any job, and there is no reason preventing him\her from accepting such a job although he\she did nothing to get a job.
2. Actively seeking work: A person who is willing to work and is actively seeking work through reading newspaper advertisement, asking friends, registration at the labour exchange offices, or asking employers.

Persons Outside Labour Force:

The population not economically active comprises all persons 15 years and over, who were neither employed nor unemployed accordingly to the definitions over.

Years of Schooling:

The number of regular years of study completed successfully. Repetition years and irregular study or courses are not taken into account.

Hours Worked:

Total number of hours actually worked during the reference period as well as overtime and time spent at the place of work on activities such as preparation of the workplace. Leaves, meal breaks and time spent on travel from home to work and vice versa are excluded from work hours.

Monthly Work Days:

Number of days at work during the month, excluding week-ends, holidays, sick and other paid or unpaid leaves. One hour of work in a given day is considered as one work-day, thus the half-day work on Thursdays, customary in Palestinian civil services, is accounted for as one a work-day in this survey.

Daily Wage:

Cash net wage paid to the wage employee from the employer. Wages received in different currencies are converted into New Israeli Shiekles according to the exchange rate in the survey period

Main Findings

This chapter presents the main findings of the labour force survey rounds in the Palestinian Territory. The results are based on four survey rounds conducted during 2004. These indicators reveal the most important characteristics of the Palestinian labour force and its components: employment, underemployment and unemployment.

Also this chapter provides, the classical distribution of employed persons by Economic Activity, occupation, employment status and place of work.

The distribution of unemployed persons is classified by sex and years of schooling.

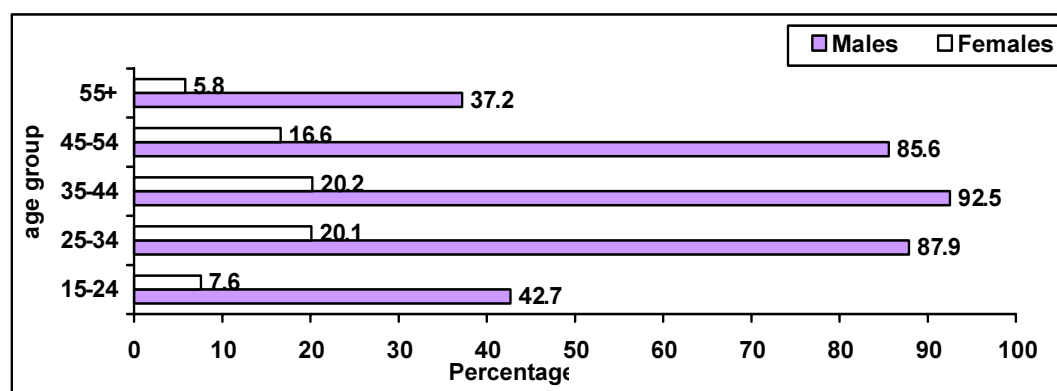

Figure 1: Labour Force Participation Rate in the Palestinian Territory by Sex: 1995-2004

3.1 Labour Force Participation (ILO Standards):

The results indicated that the labour force participation rate increased slightly in 2004 to reached 40.4% compared with 40.3% 2003. The males participation rate reached 66.9% in 2004 compared to 67.5% in 2003.

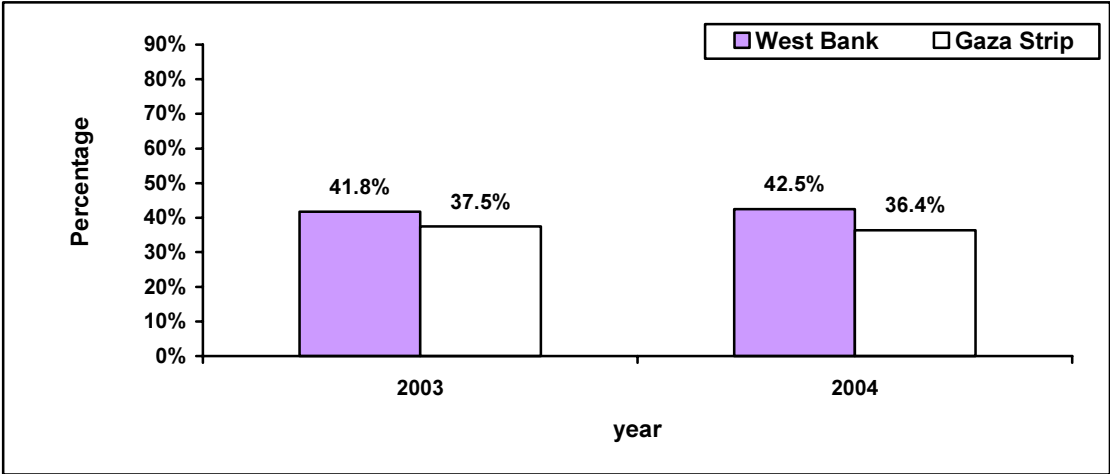

Figure 2: Labour Force Participation Rate in the Palestinian Territory by Age And Sex: 2004

As well, results revealed that the labour force participation rate for the age group 25-34 years was 54.6%; 87.9% for males and 20.1% for females. Also, the labour force participation rate for person's aged 35-44 years reached 57.5%; with 92.5% for males and 20.2% for females. On the other hand the percentage of persons aged 15-24 reached 25.6%; with 42.7% for males and 7.6% for females.

The distribution of labour force participation by region revealed the labour force participation rate in the West Bank reached 42.5%; with 68.7% for males and 15.9% for females. The results indicated that the labour force participation rate in Gaza Strip is much lower than in the West Bank. The rate in Gaza Strip reached 36.4%; with 63.5% for males and 9.1% for females.

Figure 3: Labour Force Participation Rate by Region: 2003-2004

3.2 Labour Force Participation (Relaxed Definition):

The results indicated that the labour force participation rate was 43.9% in 2004, while it was 45.1% in 2003.

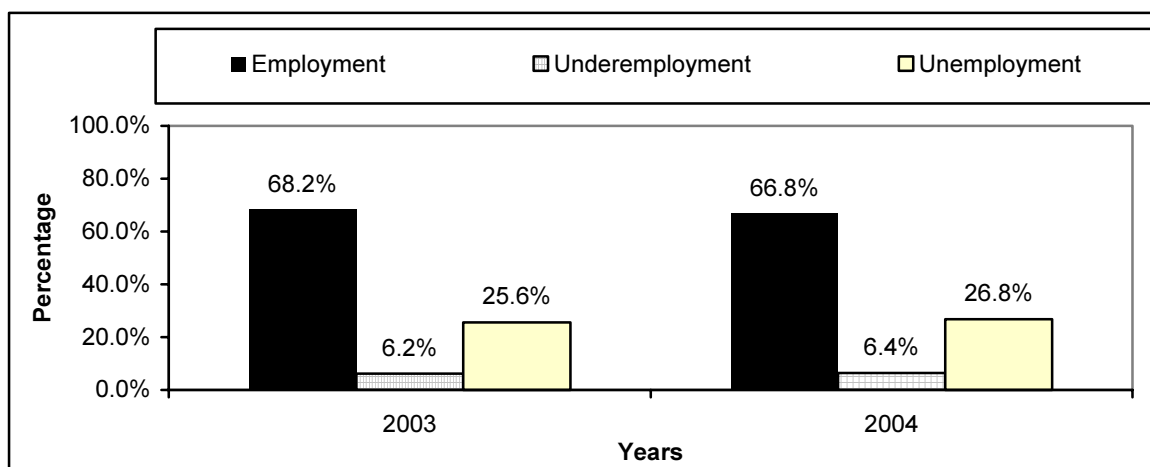

The labour force participation rate in the West Bank reached 46.3% in 2004, compared with 46.9% in 2003, while in Gaza Strip reached 39.2% in 2004 compared with 41.8% in 2003.

3.3 Labour Force Status (ILO Standards):

The labour force survey results indicated that the average of unemployment rate in the Palestinian Territory increased from 25.6% in 2003 to 26.8% in 2004. The males unemployment rate reached 26.9% in 2003, compared with 28.1% in 2004. The corresponding figures for females were 18.6% and 20.1% respectively.

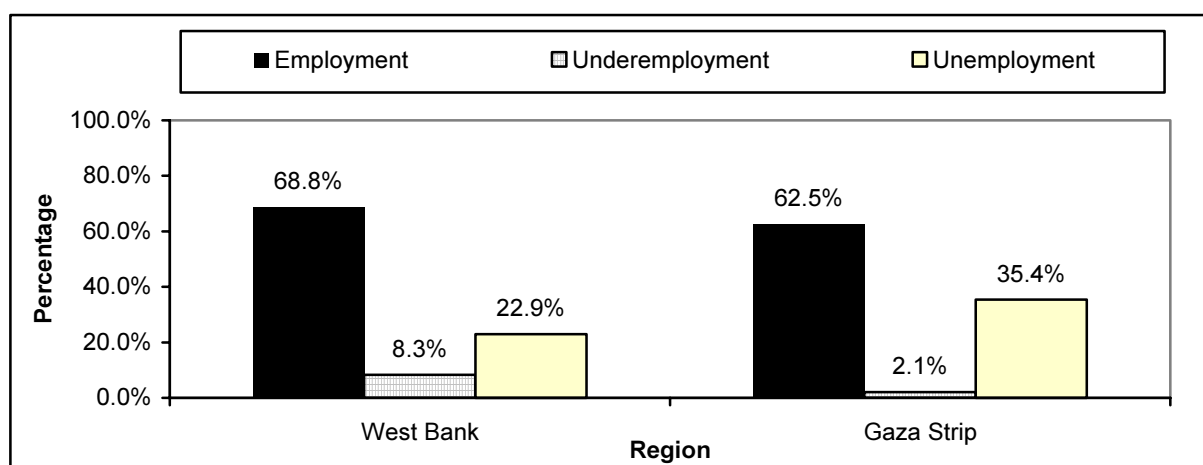

Full employment rate in the Palestinian Territory for 2004 is 66.8%; of which 64.8% for males and 77.5% for females. The full employment rate in 2003 was 68.2%; of which 66.2% for males and 78.7% for females.

Figure 4: Distribution of Labour Force Participants by Labour Force Status : 2003-2004

The distribution of labour force participants by region and labour force status indicated that in the West Bank 68.8% of labour force participants are full employed, 8.3% underemployed, and 22.9% unemployed. The corresponding figures for Gaza Strip are 62.5%; 2.1% and 35.4% in 2004.

Figure 5: Distribution of Labour Force Participants by Labour Force Status and Region: 2004

Unemployment rate for females in the West Bank reached 16.6% and for males was 24.3% in 2004. The corresponding figures for females in Gaza Strip are 31.6% and for males was 35.9% in 2004.

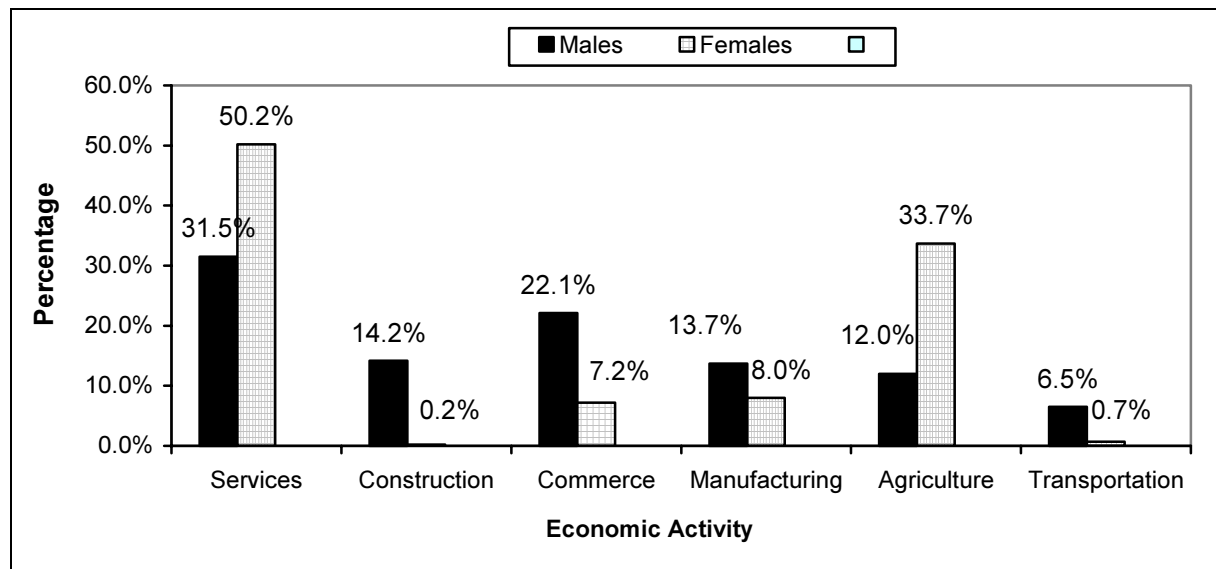

3.4 Employment (ILO Standards):

The survey results indicated that in 2004, employed persons were distributed according to place of work 64.1% working in the West Bank, 27.2% working in Gaza Strip, and 8.7% working in Israel and Israeli Settlements.

Results revealed that 34.9% of employed persons are working in services, while 19.4% are working in commerce, hotels and restaurants. The results indicated also that services are the main field of employment for females; about 50.2% of employed women work in services.

Agriculture provides job opportunities to about 33.7% of females in the West Bank and Gaza Strip.

Figure 6: Distribution of Employed Persons by Sex and Economic Activity: 2004

As well, persons are distributed by employment status: 4.1% are employers, 26.5% are self employed, 58.3% are wage employees, while 11.1% are unpaid family members.

About 14.3% of employed persons are engaged in elementary occupations, while 17.1% are engaged as craft and related trade workers. Also, 23.5% worked as professionals, technicians and clerks, and about 14.3% work as skilled agriculture workers.

The results revealed that 16.3% of males are working in elementary occupations, compared with 4.4% of females are working in this field. 18.9% of males, and 44.8% of females work as professional and technicians.

The survey results indicated that the overall average of monthly work days is 23.5 days, 24.0 for employees working in the West Bank and, 23.2 for those working in Gaza Strip, and 22.0 days for those working in Israel and Israeli settlements. The overall average weekly work hours is 43.0, of which 43.0 hours for employees working in the West Bank, and 41.6 hours for those working in Gaza Strip, and 46.3 work hours for wage employees working in Israel and Israeli settlements.

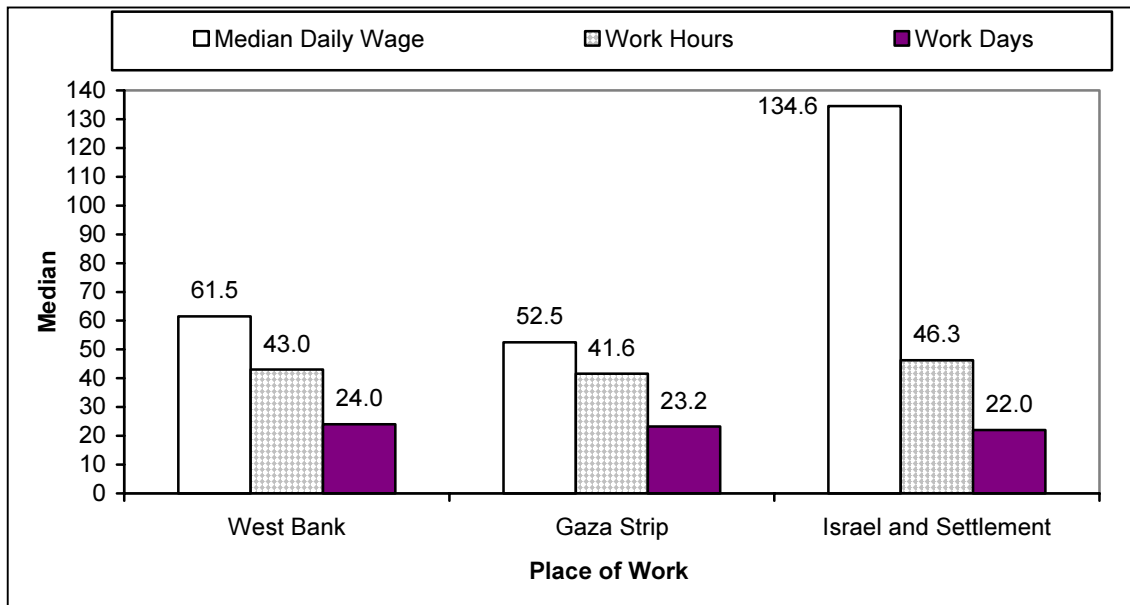

The overall median daily net wage is 62.2 NIS; of which 61.5 NIS in the West Bank, 52.5 NIS in Gaza Strip, while the wage is 134.6 NIS for those working in Israel and Israeli Settlements.

The survey results revealed a clear discrepancy between the wage of male employees and female employees. The median daily wage for male employees in the West Bank is 65.4 NIS, and 60.0 NIS for females. The corresponding figures in Gaza Strip are 50.8 NIS for males and 57.7 NIS for females.

The results indicated the differences in amount of median daily wage according to industry. The median wage for those working in agriculture in the West Bank is 50.0 NIS, 30.0 NIS in

Gaza Strip and about 70.0 NIS in Israel and Israeli settlements. The highest wage of employees working in the West Bank is for those working in Transportation, Storage and Communication 71.7 NIS, the highest wage of employees working in Gaza Strip is for those working in Services and Other Branches 57.7 NIS.

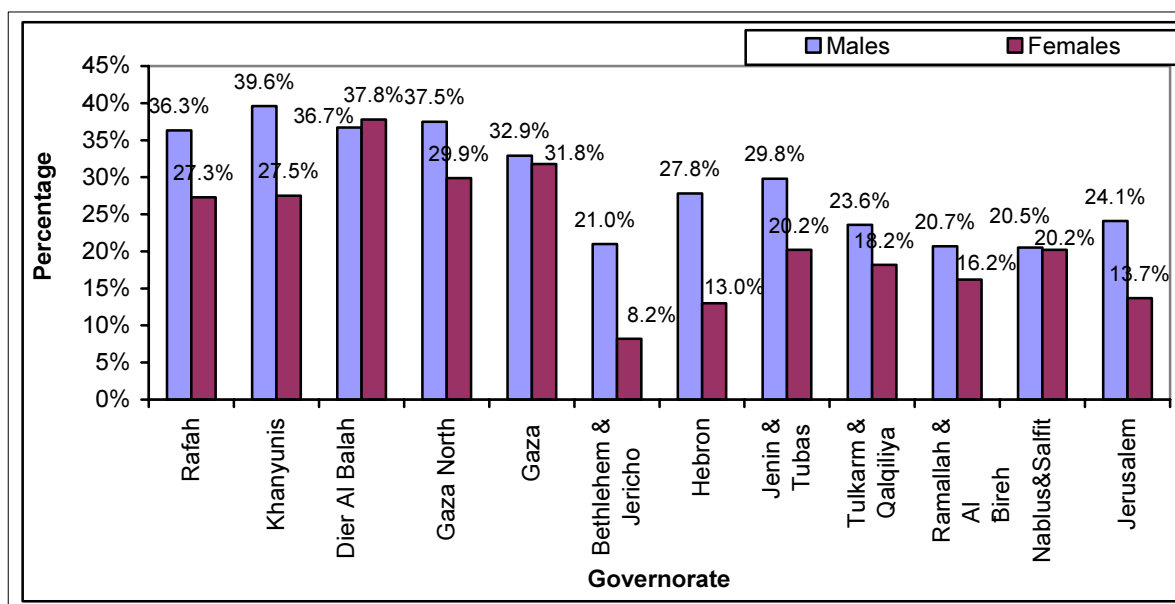

Figure 7: Median Daily Wage in NIS, Average Weekly Work Hours and Average Monthly Work Days by Place of Work: 2004

3.5 Unemployment (ILO Standards):

The survey results revealed that the average unemployment rate in 2004 is 26.8% ; 28.1% for males and 20.1% for females. Results revealed that unemployment is concentrated among the youth aged 15-24 years at 39.8%; of which 38.9% for males compared with 44.8% for females.

Figure 8: Unemployment Rate by Sex and Governorate: 2004

In addition, unemployment rate in the West Bank reached 22.9%; 24.3% for males and 16.6% for females. The highest unemployment rate was found in Jenin and Tubas (27.6%), followed by Hebron (25.3%), then Jerusalem (22.8%), then Tulkarm and Qalqiliya (22.3%), then Nablus and Salfit (20.5%), while the lowest unemployment rate in Bethlehem and Jericho (19.3%).

In Gaza Strip unemployment rate reached 35.4%; 35.9% for males, and 31.6% for females. Also the unemployment rate among the youth age (15-24) reached 50.0%; 47.6% for males compared with 67.5% for females

The highest unemployment rate by district was 38.2% in Khanyunis, followed by Dire Al-Balah (36.9%), then North Gaza (36.6%), then Rafah (35.2%). While unemployment rate in Gaza was 32.8% .

The survey results indicated that 1.2% of the unemployed males and 0.6% of females had not completed one year of schooling. Conversely, about 77.7% of unemployed females and 12.8% of unemployed males have completed 13 or more years of schooling.

3.6 Unemployment (Relaxed Definition):

The survey results revealed that the average unemployment rate in 2004 is 32.5%; 33.6% for males and 27.4% for females. In addition, unemployment rate in the West Bank reached 29.2%, and 39.9% in Gaza Strip.

3.7 Persons Outside Labour Force (ILO Standards):

The survey results indicated that about 59.6% of persons aged 15 years and over in the Palestinian Territory are not economically active, 33.1% for males and 86.5% for females. On the other hand, persons outside labour force are distributed by reason 12.2% are old or ill, 49.0% are housekeeping, 33.0% are students, and 5.8% for other reasons.

The survey results indicated that 88.5% of persons who did not complete any year of schooling are not economically active, 56.8% for those completed 1-6 years of schooling, and about 43.8% of those completed 13 or more years of schooling were outside labour force.

Chapter Four

Methodology

The methodology was designed according to the context of the survey, international standards, data processing requirements and comparability of outputs with other related surveys.

4.1 Questionnaire Design:

The questionnaire included four parts: one for recording necessary elements for survey management and controls, another part for identifying the sample households, one for recording the household roster and the demographic characteristics of household members, and one for recording labour force characteristics of working age household members.

4.2 Sample and Sampling Frame

Target Population:

The target population consists of all Palestinians aged 10 years and over living in the Palestinian Territory, excluding persons living in institutions such as prisons or shelters.

Sampling Frame:

The sampling frame consisted of a master sample of enumeration areas (EAs) selected from the population housing and establishment census 1997, the master sample consists of area units of relatively equal size (number of households), these units have been used as primary sampling units (PSUs).

4.2.1 Sample Design:

The sample is a two-stage stratified cluster random sample.

Stratification:

Four levels of stratification were made:

1. Stratification by Governorates.
2. Stratification by type of locality which comprises:
 - (a) Urban
 - (b) Rural
 - (c) Refugee Camps

Sample Size:

The sample size in the 32nd round consisted of 7,563 households, which amounts to a sample of around 28,261 persons aged 10 years and over (including 21,884 aged 15 years and over). In the 33rd round the sample consisted of 7,563 households, which amounts to a sample of around 28,646 persons aged 10 years and over (including 22,185 aged 15 years and over), in the 34th round the sample consisted of 7,626 households, which amounts to a sample of around 28,449 persons aged 10 years and over (including 22,131 aged 15 years and over). In the 35th round the sample consisted of 7,563 households; which amounts to a sample of around 28,086 persons aged 10 years and over (including 21,972 aged 15 years and over). The sample size allowed for non-response and related losses. In addition, the average number of households selected in each cell was 16.

4.2.2 Sample Rotation:

Each round of the Labor Force Survey covers all the 481 master sample areas. Basically, the areas remain fixed over time, but households in 50% of the EAs are replaced each round. The same household remains in the sample over 2 consecutive rounds, rests for the next two

rounds and represented again in the sample for another and last two consecutive rounds before it is dropped from the sample. A 50 % overlap is then achieved between both consecutive rounds and between consecutive years (making the sample efficient for monitoring purposes).

In earlier applications of the LFS (rounds 1 to 11); the rotation pattern used was different; requiring a household to remain in the sample for six consecutive rounds, then dropped. The objective of such a pattern was to increase the overlap between consecutive rounds. The new rotation pattern was introduced to reduce the burden on the households resulting from visiting the same household for six consecutive times.

4.3: Weighing, Estimations and Variance Calculation

4.3.1: Weighing

Weights have been calculated for each sampling unit. Weight reflect the sampling procedures. To make the weighing procedure feasible and simple, we assumed that the households have been selected directly within the EA.

Adjusted weights is important to reduce bias resulting from non-responses. Also “adjusting” has given consideration to demographic changes since the time of the Population, Housing and Establishments Census,1997 and the time of carrying out the survey.

4.3.2 Estimations Procedure:

To estimate a given total Y for a given sub-population A , we introduce the following formula:

$$(1) \quad \hat{Y} = \frac{y}{x} X$$

Where $\frac{y}{x}$ is a ratio estimated from the sample and X is the total number of elements in the population related to the variable x in the denominator, usually X is taken from a recent census or from recent population projections.

The estimator for a given ratio for sub-population A is the following:

$$(2) \quad \hat{R}_A = \frac{\hat{Y}_A}{\hat{X}_A}$$

Where:

\hat{R}_A = The estimate for the ratio of two variables, Y/X , in sub-population A .

\hat{X}_A = The estimated total for variable X in sub-population A , given by formula (1)

\hat{Y}_A = The estimated total for variable Y in sub-population A , also given by formula (1)

Means and proportions are special types of ratios. In the case of the mean, the variable X , in the denominator of the ratio, is defined to equal 1 for each element so that the denominator is the sum of the weights in the sub-population.

In the case of proportions, the variable X in the denominator is also defined to equal 1 for all elements. But, in addition, the variable Y in the numerator is binomial and is defined to equal

either 0 or 1, depending on the absence or presence, respectively, of a specified attribute in the element observed.

4.4 Calculation of Variances:

It is very important to calculate standard errors for the main survey estimates so that the user can have an idea of their reliability or precision.

The variance calculation uses the method of ultimate clusters. Within any domain of estimation, for a sub-population A , and for a characteristic Y , the formulas are:

(a) The variance of an estimator of a total is estimated by:

$$(3) \quad V\left(\hat{Y}_A\right) = \sum_h \left[\frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{Y}_{Ahi} - \frac{\hat{Y}_{Ah}}{n_h} \right)^2 \right]$$

Where:

$$(4) \quad \hat{Y}_{Ahi} = \sum_{j \in A} W_{hij} Y_{hij}$$

and:

$$(5) \quad \hat{Y}_{Ah} = \sum_i \sum_{j \in A} W_{hij} Y_{hij}$$

The expression in (3) is an unbiased estimator of the Variance.

(b) The variance of an estimator of a ratio is estimated by:

$$(6) \quad V\left(\hat{R}_A\right) = \frac{1}{\hat{X}_A^2} \left[V\left(\hat{Y}_A\right) + \hat{R}_A^2 V\left(\hat{X}_A\right) - 2 \hat{R}_A \text{COV}\left(\hat{X}_A, \hat{Y}_A\right) \right]$$

Where:

$$\text{COV}\left(\hat{X}_A, \hat{Y}_A\right) = \sum_h \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{X}_{Ahi} - \frac{\hat{X}_{Ah}}{n_h} \right) \left(\hat{Y}_{Ahi} - \frac{\hat{Y}_{Ah}}{n_h} \right)$$

And:

$V\left(\hat{Y}_A\right)$ and $V\left(\hat{X}_A\right)$ are calculated according to formula (3);

\hat{X}_A is calculated according to formula (1) and \hat{R}_A according to formula (2).

4.5 Training and Recruitment:

The purpose of the training courses was to teach participants the main skills needed to conduct interviews. Two training courses were held, one in Ramallah for the West Bank

trainees, and one in Gaza City for Gaza Strip trainees. Each course consisted of two parts: one on survey methodology including survey design, questionnaire design, interviewing techniques, and field operations; and one part on specifications of the labour force survey, including concepts and definitions, fieldwork procedures, data collection, editing, coding, tips for asking questions and recording answers, as well as field team organization and field supervision.

The training courses included lectures and field exercises. Each course lasted 3 days, training 15 interviewers and 4 supervisors.

4.6 Fieldwork:

The preparation phase for the LFS included recruiting and training of interviewers and supervisors. The staff on this project participated in previous survey projects at PCBS, and are highly qualified.

The West Bank was divided into three areas (North, Middle and South), each of which was supervised by one field supervisor. Each region consists of a number of districts, and the fieldwork was carried out by one fieldwork team, consisting of 2-3 interviewers.

Gaza Strip was also divided into three areas (North, Middle and South). Fieldwork activities were carried out by one fieldwork team, each consisting of a supervisor, an editor and 3 interviewers.

Special procedures were followed in order to ensure quality control and efficient organization of fieldwork. Such procedures are important for supervising work, as well as for receiving and delivering questionnaires, maps, sample lists in addition to other forms used for management and quality control.

Field operations were conducted in the Palestinian Territory from 01/01/2004 to 31/12/2004. Fieldwork teams were distributed to each area on the basis of the sample size. The number of LFS' fieldwork team was 22, including the fieldwork coordinator, 4 supervisors, 3 editors, and 10 interviewers including coders.

4.7 Data Processing:

The data processing stage consisted of the following operations:

1. Editing Before Data Entry

All questionnaires were then edited in the main office using the same instructions adopted for editing in the field.

2. Coding

At this stage, the Economic Activity variable underwent coding according to West Bank and Gaza Strip Standard Commodities Classification, based on the United Nations ISIC-3. The Economic Activity for all employed and ever employed individuals was classified at the fourth-digit-level. The occupations were coded on the basis of the International Standard Occupational Classification of 1988 at the third-digit-level (ISCO-88).

3. Data Entry

In this stage data were entered into the computer, using a data entry template BLAISE. The data entry program was prepared in order to satisfy the following requirements:

- Duplication of the questionnaire on the computer screen.
- Logical and consistency checks of data entered.

- Possibility for internal editing of questionnaire answers.
- Maintaining a minimum of errors in digital data entry and fieldwork.
- User- friendly handling.

Note: The sample weights were revised according to the revised version of population estimates 2005, population age-sex structure and place of residence. New sample weights have been calculated.

Chapter Five

Data Quality

Since the data reported here are based on a sample survey and not on a complete enumeration, they are subjected to sampling errors as well as non-sampling errors.

Sampling errors are random outcomes of the sample design, and are, therefore, in principle measurable by the statistical concept of standard error. A description of the estimated standard errors and the effects of the sample design on sampling errors are provided in the previous chapter.

Non-sampling errors can occur at the various stages of survey implementation whether in data collection or in data processing. They are generally difficult to be evaluated statistically. They cover a wide range of errors, including errors resulting from non-response, sampling frame coverage, coding and classification, data processing, and survey response (both respondent and interviewer-related). The use of effective training and supervision and the careful design of questions have direct bearing on limiting the magnitude of non-sampling errors, and hence enhancing the quality of the resulting data. The following are possible sources of non-sampling errors:

- Errors due to non-response because households were away from home or refused to participate. The overall non response rate amounted to almost 17.5% which is relatively low; a much higher rates is rather common in an international perspective. The refusal rate was only 0.7%. It is difficult however to assess the amount of bias resulting from non response. The PCBS has not yet undertaken any non-response study. Such a study may indicate, that non-response is more frequent in some population groups than in others. This is rather normal and such information is necessary to be able to compensate for bias resulting from non-response errors.
- Errors in data processing, such as coding and punching. The data underwent checking and completion of missing information in the office and logical checks were computerized as well as manually, including call-backs if needed.
- Response errors which resulted from misunderstanding of the questions, interviewers' bias in asking the questions and in probing. Thorough training, supervision, and various quality control checks were used to minimize bias resulting from these kinds of errors.

The demographic data, including the sex ratio by age were computed and found generally reasonable and consistent with those found from other sources. These results and the various checks for external validity indicate that the survey data are of a high quality.

The non-response rate was between 11%-13% before October 2000. Since that time, and after the Israeli aggression on the Palestinian Territory (the curfew and closure), the rate increased to reach 15.7% in some rounds.

The main technical problem when this type of this non-response occur is the bias in estimating the main indicator of LFS (Unemployment rate). The closure and curfew have a strong influence on the unemployment rate, and when we putting aside the closure area, then will be

there a bias for the open area. So, the unemployment rate estimation will be less than the actual rate.
