Yes - please write in cut-off

No cut-off ☒

14. What were the different stages in your sampling procedure?

PLEASE WRITE IN:

10 of 48 provinces (*gouvernorats*) were purposively selected. They were selected to maximize diversity (and representativeness) with respect to economic situation, ethnic composition, population size, geographic location, level of urbanization, etc.

Districts (communes) were then selected in each province: (1) the largest commune was selected, and (2) a number of additional communes were selected randomly, the number being determined by the population of the province.

Respondents were selected by quota in each district based on sex and age, with the proportion in each of the four age categories determined by the age distribution of the district as reported in the most 1998 census.

15. What was the final number of clusters or sampling points?

Respondents were sampled in a total of 36 districts (*communes*)

No clusters

16. What was the sampled unit you got from office sampling?

Address ☐ → **ANSWER Q17**

No ☐ → **GO TO Q20**

IF QUOTA CONTROLS

19. In what way were quota controls used?
PLEASE WRITE IN:

Quotas based on sex and age were used to select respondents at the end point of the sample. In each *commune*, an equal number of men and women were selected. Age quotas were established with reference to the age distribution of the commune as reported in the most recent (1998) census.

EVERYONE PLEASE ANSWER

24. All in all, what are the known limitations of your realized sample?
