

Documentation of (Northern) Sudan MICS 2000

Size

Households: [25200]
Household members: [147552]
Women: [22946]
Children: [23295]

Household identification : Hid

Household members identification : Hhmid

Type of weights : Weight normalized

Variable weight : Household and household members = Hhweight

Variable weight : Women = Wmweight

Variable weight : Children = chweight.

Notes on Data File

1. Data relates to northern Sudan and accessible towns and surrounding rural areas of southern Sudan.
2. Weighted tables result in equal urban/rural distribution and presentation of data for only the geographic (northern) Sudan. Southern Sudan is considered as an independent stratum and is usefully presented in separate tables.
3. Age heaping occurred at ages ending with '0' and '5', especially for women.
4. All the women from age 15 and up fall into one of only two categories: 'currently married' or 'formerly married' therefore there is no information on the different categories of 'formerly married' (e.g. divorced, separated or widowed). There were no 'never married'.
5. The survey was carried out in summer, after the school year, therefore data must be adjusted to account for this. The official primary school-going age is 6-13, however, as the data was collected after the school year, the range has to be adjusted by shifting the age range forward by one year. Present data for the official age range (6-13), and also for age groups 7-14 and 7-12.
6. For weight and height measurements, different string lengths have been used to define missing cases in the variable label and in the data (97 and 970). The label needs modification to fit the data.
7. The data set did not include a created standard variable (CM11x) to determine mothers who had a birth in the last 12 months. This variable has been created using information from the tetanus toxoid module (TT2).

Inconsistencies in the Data File

1. 6 Children eligible but the child labor module is missing
