## Identification

---

### SURVEY ID NUMBER

ZAF\_2022-2023\_GPSJS\_v01\_M

### TITLE

Governance Public Safety and Justice Survey 2022-2023

### ABBREVIATION OR ACRONYM

GPSJS 2022-2023

### COUNTRY

Name	Country code
South Africa	ZAF

### STUDY TYPE

Household Survey

### ABSTRACT

In April 2018, StatsSA launched the Governance Public Safety and Justice Survey (GPSJS) in response to the need for standardised international reporting standards on governance and access to justice that are recommended by the SDGs, ShaSA and Agenda 2063. In compliance with these standards, Stats SA discontinued the separate publication of the Victims of Crime Survey (VCS) and incorporated it within the new GPSJS series. Therefore, the GPSJS represents the new source of microdata on the experience and prevalence of particular kinds of crime within South Africa. The GPSJS data can be used for research in the development of policies and strategies for governance, crime prevention, public safety and justice programmes with the main objectives of the survey being to:

- Provide information about the dynamics of crime from the perspective of households and the victims of crime.
- Explore public perceptions of the activities of the police, prosecutors, courts and correctional services in the prevention of crime and victimisation; and
- Provide complimentary data on the level of crime within South Africa in addition to the statistics published annually by the South African Police Service.

NOTE: The GPSJS is a continuation of the VCS series, which ended with VCS 2017/18. Therefore, the VCS 2018/19 can be extracted from GPSJS 2018/19 and is comparable to previous VCS's only where questions remained the same. Please see Data Quality Notes for more information on comparability.

### KIND OF DATA

Sample survey data

### UNIT OF ANALYSIS

Households and individuals

## Version

---

### VERSION DESCRIPTION

Version 01: Edited, anonymised dataset for public access

### VERSION DATE

2023

### VERSION NOTES

Version 1 of the dataset was downloaded from StatsSA on 2 November 2023 and only included two files: a household file and an individual file.

## Scope

### NOTES

The GPSJS is a countrywide household-based survey which collects data on two types of crimes, namely, vehicle hijacking and home robbery. Business robbery is not covered by the survey. The survey focuses on capturing perceptions and experiences of crime and their views regarding access to, and effectiveness of the police service and criminal justice system. Households are also asked about community responses to crime, while individuals are asked information on legitimacy voice, equity and discrimination. The survey profiles different aspects that are inherent in the different types of crime, such as the location and timing of the different crimes, the use of weapons and the nature and extent of the violence that takes place. Additionally, the survey captures demographic characteristics and the main source of household and individual income.

## Coverage

### GEOGRAPHIC COVERAGE

National coverage

### GEOGRAPHIC UNIT

The lowest level of geographic aggregation covered by the data is province.

### UNIVERSE

The target population of the survey consists of all private households in all nine provinces of South Africa, as well as residents in workers' hostels. The survey does not cover other collective living quarters such as students' hostels, old-age homes, hospitals, prisons and military barracks. It is only representative of non-institutionalised and non-military persons or households in South Africa.

Statistics South Africa	Government of South Africa

## Sampling

### SAMPLING PROCEDURE

The GPSJS 2022/23 uses the Master Sample (MS) sampling frame that has been developed as a general-purpose household survey frame that can be used by all other Stats SA household-based surveys that have design requirements that are reasonably compatible with GPSJS. The GPSJS 2022/23 collection was drawn from the 2013 Master Sample. This master sample is based on information collected during Census 2011. In preparation for Census 2011, the country was divided into 103 576 enumeration areas (EAs). The Census EAs, together with the auxiliary information for the EAs, were used as the frame units or building blocks for the formation of primary sampling units (PSUs) for the master sample, since they covered the entire country and had other information that is crucial for stratification and creation of PSUs.

There are 3 324 primary sampling units (PSUs) in the master sample with an expected sample of approximately 33 000 dwelling units (DUs). The number of PSUs in the current master sample (3 324) reflect an 8,0% increase in the size of the master sample compared to the previous (2008) master sample (which had 3 080 PSUs). The larger master sample of PSUs was selected to improve the precision (smaller coefficients of variation, known as CVs) of the GPSJS estimates.

## Data collection

### DATES OF DATA COLLECTION

Start	End

2022-04

2023-03

**DATA COLLECTION MODE**

Computer Assisted Telephone Interview

**DATA COLLECTION NOTES**

Since 2013, Stats SA has changed the data collection methodology to continuous data collection. Data is collected from April of the current year to March of the proceeding year. Therefore, the reference period for the experience of crime estimates in the GPSJS 2022/23 is April 2022 to March 2023.

Stats SA suspended face-to-face data collection for all its surveys on 19 March 2020 as a result of the COVID-19 pandemic and restricted movement. In this regard, Stats SA changed the mode of data collection for GPSJS from Computer-assisted Personal Interviews (CAPI) to Computer-assisted Telephone Interviewing (CATI).

**DATA COLLECTORS**

Name	Affiliation
Statistics South Africa	Government of South Africa

## questionnaires

**QUESTIONNAIRES**

The GPSJS questionnaire is based on international reporting standards of governance, public safety and justice defined by the SDGs.

Sections 1 to 3 of the questionnaire relate to household crimes. A proxy respondent (preferably head of the household or acting head of household) answered on behalf of the household. Section 4 to 9 of the questionnaire relate to crimes experienced by individuals and were asked of a household member who was selected using the birthday section method. This methodology selects an individual who is 16 years or older, whose birthday is soonest after the survey date.

## data appraisal

**DATA APPRAISAL**

Comparability to VCS series:

While redesigning the VCS into the GPSJS, some questions were modified in order to align the series with international reporting demands (e.g. SDGs) and to improve the accuracy of victim reporting. This caused a break of series for affected questions, in particular questions on 12-month experience of crime. The question on 5-year experience of crime was not changed and hence there is no break of series. The 5-year trends can therefore be used as a proxy for the 12-month series as the two follow similar patterns. Similarity of shapes of the two series makes it possible to predict increase or decrease of crime during the past 12 months using the 5-year series.

Comparability to previous GPSJS series:

To facilitate CATI data collection, the GPSJS 2019/20 sample was re-used and households that provided operational telephone numbers in 2019/20 were contacted and interviewed. The data is adjusted during the weighting process due to non-response from some households. The details of how the adjustment was done is contained in the metadata technical report. Given the change in the data survey mode of collection from CAPI to CATI, and the fact that the GPSJS 2020/21 estimates are not based on a full sample, comparisons with previous years should be made with caution.
