Identification

SURVEY ID NUMBER

USA_1880_PHC-10PCT_v01_M_v7.5_A_IPUMS

TITLE

United States Census of 1880 - IPUMS Subset

ABBREVIATION OR ACRONYM

PHC United States 1880 (10%) (IPUMS Harmonized Subset)

COUNTRY

Name	Country code
United States	USA

STUDY TYPE

Population and Housing Census [hh/popcen] IPUMS International

SERIES INFORMATION

DOI:10.18128/D020.V7.5

KIND OF DATA

Population and Housing Census [hh/popcen]

UNIT OF ANALYSIS

Persons, households, and dwellings

UNITS IDENTIFIED:

- Dwellings: yes
- Vacant Units: no
- Households: yes
- Individuals: yes
- Group quarters: yes

UNIT DESCRIPTIONS:

- Dwellings: Any building or place of abode, of whatever character, material or structure, in which any person is at the time living, whether in a room above a warehouse or factory, a loft above a stable or a wigwam on the outskirts of a settlement, equally with a dwelling house in the usual, ordinary sense of that term.
- Households: Persons living alone, families in the ordinary sense of the term, and also all larger aggregations of people having only the tie of a common roof and table. A hotel, with all its inmates, constitutes but one family. A hospital, a prison, an asylum is equally a family for the purposes of the census. On the other hand, the solitary inmate of a cabin, a loft, or a room finished off above a store constitutes a family. In the case of tenement houses and of the so-called "flats" of the great cities, as many families are to be recorded as there are separate tables.
- Group quarters: Yes

Version

VERSION DESCRIPTION

Version 7.5. The datasets contain selected variables from the original census microdata plus harmonized variables from the IPUMS-International database.

VERSION DATE

2024-10-05

Scope

NOTES

Additional notes on a sample that is part of this study: United States 1880 (10%)

Coverage

GEOGRAPHIC UNIT

County

UNIVERSE

All persons living in the United States except for "Indians not taxed", which refers to Native Americans living on reservations or under tribal rule. Native Americans who had renounced tribal rule and "exercise the rights of citizens" were to be enumerated. Soldiers and civilian employees of the United States Army were included in the enumeration.

IPUMS	University of Minnesota

Sampling

SAMPLING PROCEDURE

MICRODATA SOURCE: Department of the Interior

SAMPLE SIZE (person records): 5882038.

SAMPLE DESIGN: 1-in-10 national random sample of the population with a 1-in-5 minority oversample. "Minorities" are defined as persons whose race was Native American or African American, whose race or birthplace indicated that they were Chinese, or whose name or birthplace indicated Hispanic origins. Households including a minority were sampled at a 1-in-5 rate.

WEIGHTING

Weights computed by data producer should be used for most types of analysis.

Data collection

DATES OF DATA COLLECTION

Start	End
1880-06-01	1880-06-01

TIME PERIODS

Start date	End date
1880-06-01	1880-06-01

DATA COLLECTION MODE

Face-to-face [f2f]

DATA COLLECTION NOTES

de jure, CENSUS DAY: June 1, 1880

questionnaires

QUESTIONNAIRES

The census operation involved five schedules. Schedule 1 was used to enumerate the population and collected information on individual characteristics. Other schedules were used to record information about agriculture, manufacturing, and to report social and mortality statistics.

Access policy

CONTACTS

Name
Department of the Interior

CONFIDENTIALITY

IPUMS International distributes integrated microdata of individuals and households only by agreement of collaborating national statistical offices and under the strictest of confidence. Before data may be distributed to an individual researcher, an electronic license agreement must be signed and approved. To gain access to the data, a researcher must agree to the following: (1) Implement security measures to prevent unauthorized access to census microdata. Under IPUMS International agreements with collaborating agencies, redistribution of the data to third parties is prohibited. (2) Use the microdata for the exclusive purposes of scholarly research and education. Researchers must explicitly agree to not use microdata acquired for any commercial or income-generating venture. (3) Maintain the confidentiality of persons, households, and other entities. Any attempt to ascertain the identity of persons or households from the microdata is prohibited. Alleging that a person or household has been identified is also prohibited. (4) Report all publications based on these data to IPUMS International, which will in turn pass the information on to the relevant national statistical agencies. Once a project is approved, a password is issued and data may be acquired through the Internet. Penalties for violating the license include: revocation of the license, recall of all microdata acquired, filing of a motion of censure to the appropriate professional organizations, and civil prosecution under the relevant national or international statutes. These safeguards mirror the principles from the Joint ECE/Eurostat Work Session on Statistical Data Confidentiality. Employees of the Minnesota Population Center who work with the census microdata to produce the harmonized database also sign agreements to respect the confidentiality of the data. IPUMS International works with each country's statistical office to minimize the risk of disclosure of respondent information. The details of the confidentiality protections vary across countries, but in all cases, names and detailed geographic information are suppressed and top-codes are imposed on variables such as income that might identify specific persons. In addition, IPUMS International uses a variety of technical procedures to enhance confidentiality protection. These include the following: (1) Swapping an undisclosed fraction of records from one administrative district to another to make positive identification of individuals impossible. (2) Randomizing the placement of households within districts to disguise the order in which individuals were enumerated or the data processed. (3) Aggregating codes of sensitive characteristics (e.g., grouping together very small ethnic categories) (4) Top- and bottom-coding continuous variables to prevent identification of extreme cases. The safety record for public-use census microdata is apparently perfect. In almost four decades of use, there has not been a single verified breach of statistical confidentiality. The measures implemented by the IPUMS International are designed to extend this record.

ACCESS CONDITIONS

An adapted version of the dataset, harmonized for international comparability, is available from IPUMS International (<https://international.ipums.org/international/>) under the following conditions:

IPUMS International distributes integrated microdata of individuals and households only by agreement of collaborating national statistical offices and under the strictest of confidence. Before data may be distributed to an individual researcher, an electronic license agreement must be signed and approved. To gain access to the data, a researcher must agree to the following:

(1) Implement security measures to prevent unauthorized access to census microdata. Under IPUMS International agreements with collaborating agencies, redistribution of the data to third parties is prohibited.

(2) Use the microdata for the exclusive purposes of scholarly research and education. Researchers must explicitly agree to not use microdata acquired for any commercial or income-generating venture.

(3) Maintain the confidentiality of persons, households, and other entities. Any attempt to ascertain the identity of persons or households from the microdata is prohibited. Alleging that a person or household has been identified is also prohibited.

(4) Report all publications based on these data to IPUMS International, which will in turn pass the information on to the relevant national statistical agencies.

Once a project is approved, a password is issued and data may be acquired through the Internet. Penalties for violating the license include: revocation of the license, recall of all microdata acquired, filing of a motion of censure to the appropriate professional organizations, and civil prosecution under the relevant national or international statutes.

These safeguards mirror the principles from the Joint ECE/Eurostat Work Session on Statistical Data Confidentiality. Employees of the Minnesota Population Center who work with the census microdata to produce the harmonized database also sign agreements to respect the confidentiality of the data.

CITATION REQUIREMENTS

Steven Ruggles, Lara Cleveland, Rodrigo Lovaton, Sula Sarkar, Matthew Sobek, Derek Burk, Dan Ehrlich, Quinn Heimann, Jane Lee. DDI DOCUMENT VERSION

Version 7.5 October 2024. NEW FEATURES.

- Historical data from NAPP project now available from IPUMS-International.
- Historical census data from Canada, Denmark, the United Kingdom, Germany, Iceland, Norway, Sweden, and the United States for the period 1703 to 1911 are now available from IPUMS-International. The complete count and sample datasets were previously disseminated by the North Atlantic Population Project (NAPP). Where possible, the data have been integrated into existing IPUMS-International variable coding schema. Some new variables have been created that are available only for these pre-1960 datasets. NAPP data users should note that many NAPP variables are available from IPUMS-International by different names. For a complete list of NAPP variables that have been renamed in IPUMS-International, refer to the crosswalk.
- Individual country shapefiles for the third-level administrative level of geography are now available for a few IPUMS samples.
- New spatially harmonized previous-residence variables at the second administrative level of geography are available for several samples in this data release. More information is available here. Users should note that many older migration variables are available by different names. Refer to this table for a crosswalk of old and corresponding new migration variables.
- IPUMS now hosts the Census Mosaic data collection. Census Mosaic identifies, gathers, harmonizes, and distributes surviving historical census microdata from regions of Continental Europe where complete centralized records are not available. The Mosaic project was founded by a consortium of historical social scientists in Europe. Data can be downloaded as static files from the Census Mosaic website. Although the data are not yet integrated fully into IPUMS International, variables have been standardized and harmonized to be roughly compatible with IPUMS coding structures.

NEW SAMPLES.

- Full-count datasets for Great Britain 1851, 1861, 1871 (Scotland only), 1891, and 1901.
- Full-count dataset for Sweden 1910. Denmark (1845, 1880, and 1885)
- Labor force surveys from Spain and eight new labor force surveys from Italy added to the series.

Newly added countries:

Benin, Cote d'Ivoire, Finland, Guatemala, Honduras, Laos, Lesotho, Mauritius, Myanmar, Papua New Guinea, Russia, Slovak Republic, Suriname, Togo, and Zimbabwe

New samples for:

Bolivia, Cambodia, Chile, Cuba, Cote d'Ivoire, Egypt (1848 and 1868, historical samples), Fiji, Guinea, Ireland, Israel, Italy, Lao PDR, Mexico, Morocco, Nepal, Netherlands, Palestine, Peru, Philippines, Puerto Rico, Rwanda, Senegal, Sierra Leone, South Africa, Switzerland, Uganda, United States, United Kingdom, United States, Vietnam, and Zimbabwe

SUPPLEMENTAL DATA.

Data from censuses from Benin and Lesotho that record individual fertility and/or mortality events were made available in IPUMS-International. These files can be downloaded and linked to data produced by the extract system.

NEW VARIABLES.

- IPUMS-International now provides harmonized and year-specific geography variables for all countries including 13 new samples from Dominican Republic, Germany, Indonesia, Israel, Malaysia, Mongolia, Nicaragua, Nigeria, Palestine, Paraguay, Thailand, United Kingdom, and Uruguay. First-level and second-level year specific geography variables are also available for all countries. IPUMS provides corresponding, downloadable GIS boundary files for all harmonized and year specific geography variables. More information about IPUMS geography variables is available here.
- IPUMS International now provides spatially harmonized previous-residence variables at the first administrative level of geography. The codes for the spatially harmonized previous-residence variables match the spatially harmonized place of current residence. More information is available here.
- IPUMS International provides spatially harmonized previous-residence variables at the first administrative level of geography for all samples; previously available country-specific migration variables at the first administrative level that were not fully harmonized spatially have been phased out. Spatially harmonized previous-residence variables at the second administrative level of geography are available for selected samples. More information is available here. Users should note that many older migration variables are available by different names. Refer to this table for a crosswalk of old and corresponding new migration variables.
- IPUMS International now provides spatially harmonized previous-residence variables at the first administrative level of

geography for all samples. Spatially harmonized previous-residence variables at the second administrative level of geography are available for several samples in this data release. More information is available [here](#). Users should note that many older migration variables are available by different names. Refer to this [table](#) for a crosswalk of old and corresponding new migration variables.

--Lower (third) level geography codes and GIS files have been added for Bangladesh, China, Ethiopia, Mali, Rwanda, and Zimbabwe. Some geography codes and labels might have changed for these countries to accommodate the newer lower level geography.

--Added more detailed 3-digit industry and occupation variables for China 2000.

EDITED SAMPLES.

--Revised full-count data for Great Britain 1881

--Revised full-count datasets for Sweden 1890 and 1900. The revision includes the following changes that improve comparability across Sweden datasets:

--Revisions to certain ethnicity and work variables (and the underlying source data): ORIGIN, LABFORCE, OCCHISCO, OCRELATE, OCSTATUS.

--Revisions to unharmonized source variables: SE1890A_HISCOSE, SE1890A_HISCRELSE, SE1890A_HISCSTATSE, SE1890A_OCCMULTISE, SE1900A_HISCOSE, SE1900A_HISCRELSE, SE1900A_HISCSTATSE, SE1900A_OCCMULTISE.

--A new United States 1850 full-count dataset now matches the corresponding dataset distributed by the USA IPUMS data project. The source variable US1850A_0502 (HISTID) provides a linking key to match person records to the USA version of the data. The IPUMS International version of the data contains names, which the USA version cannot distribute.

EDITED VARIABLES.

An error affecting HHWT for South Africa 2007 was corrected. The existing values were adjusted by a factor of 0.01.

AGEMARR was edited to add data for Hungary 1980 and 1990.

Harmonized and year-specific geography variables for Brazil and Colombia have been edited to accommodate for the availability of refined municipal boundaries. Users should be aware that codes and labels have changed in all harmonized and year specific geography variables for these two countries.

Errors affecting BPLSE2 (formerly BLPARSE) for Sweden 1890 and the underlying source variable were corrected. Several thousand cases were incorrectly coded as 258101000. These cases have been updated with the correct code: 258171000.

Harmonized geography variables for Italy, Philippines, Rwanda, and United States have been edited to accommodate new samples. Users should be aware that codes and labels have changed in all harmonized and year specific geography variables for these countries. More information about IPUMS geography variables is available [here](#).

The codes for the source variable RW2002A_0419 were corrected to include 0 and 8 as possible responses, which were previously identified as 'unknown years' within primary education.

Errors affecting EDUCFJ for Fiji 2006 were corrected.

A problem with PERWT for Tanzania 2012 was corrected. The previous weights were adjusted to properly reflect population totals.

MOMLOC, POPLOC, and PARRULE were updated for the United States 2010 and 2015 samples to include additional information on subfamilies. Prior to this correction, persons above age 17 were not receiving links to their co-resident mothers and fathers.

An error affecting codes for the URBAN variable in Egypt 1986 for Cairo, Alexandria, Port-Said, and Suez was corrected.

An error in INCEARN affecting Venezuela 2001 was corrected. Earned income in the source variable VE2001A_0440 is interpreted as a monthly amount, thus adjustments previously applied to convert data from daily or weekly income were suppressed.

All the six Brazil samples in IPUMS International were replaced with higher density samples.

An edited version of the Chile 2017 sample was introduced to correct an error in household breaks.

Errors affecting codes for GEO1_ZA in South Africa 2011 and ENUTS1 in United Kingdom 1991 were corrected.

Harmonized geography variables for Cambodia, Fiji, and Nepal have been edited to accommodate new samples. Users should be aware that codes and labels have changed in all harmonized and year-specific geography variables for these

countries. More information about IPUMS geography variables is available [here](#).

An error in PERWT affecting Nepal 2001 was corrected.

Errors affecting a code in GQ for Brazil 2010 and Indonesia 2010 were corrected. Both census samples now identify 1-person units created by splitting a large household.

An error in MARRNUM affecting Indonesia 1976 was corrected. Some codes for GEO1_EG2006 and GEO2_EG2006 were edited.

Harmonized geography variables for Bolivia, Cuba, Guinea, Ireland, Morocco, Palestine, Senegal, South Africa, and Uganda have been edited to accommodate new samples. Users should be aware that codes and labels have changed in all harmonized and year-specific geography variables for these countries. More information about IPUMS geography variables is available [here](#).

An error in INCEARN affecting Brazil 1980 was corrected.

An error in EDATTAIN affecting Ireland 1971 and 1981 was corrected.

A small proportion of person records in Mexico 1960 were re-classified in MIGRATEP based on information about their current and previous residence. These were previously coded to 'different major administrative unit', even though their place of residence suggests that their last move was within the same major administrative unit.

The second-level technician (higher) degrees for Spain 1991, 2001, and 2011 were re-classified into post-secondary technical education in EDATTAIN.

An error affecting codes for SEX for Egypt 1848 and 1868 was corrected. The values for male and female had been reversed.

A problem with HHWT and PERWT for Canada 2011 was corrected. The previous weights were adjusted to properly reflect population totals.

Harmonized geography variables for Cambodia, Lao PDR, Mexico, Peru, Switzerland, Vietnam, Puerto Rico, United Kingdom, and United States have been edited to accommodate new samples. Users should be aware that codes and labels have changed in all harmonized and year-specific geography variables for these countries. More information about IPUMS geography variables is available [here](#).

Harmonized geography variables for Chile and Sierra Leone have been edited to accommodate new samples. Users should be aware that codes and labels have changed in all harmonized and year-specific geography variables for these countries. More information about IPUMS geography variables is available [here](#).

An error affecting codes for COMPUTER for Senegal 2013 was corrected.

An error affecting labels available in IND for Peru 1993 was corrected.

An error affecting codes for persons previously residing abroad for MIG1_5_BO in Bolivia 2001 and 2012 was corrected.

EDUCAR, EDATTAIN, and YRSCHOOL were adjusted in the Argentina samples to incorporate information on completion of education levels in the data harmonization.

HHWT and PERWT were calibrated in Kenya 1979 to properly reflect the population distribution by province.

In GQ (group quarters status), persons residing in hospitals of all types were reclassified to 'institutional group quarters' from 'other group quarters,' making their treatment consistent with GQTYPE.

Errors affecting codes for BPLBJ2 in Benin 1979, 1992, and 2002 were corrected.

Errors affecting codes for GEO2_BR1970 in Brazil 1970 were corrected.

99	Unknown/group quarters not identified

description

DEFINITION

GQ identifies households as vacant dwellings, group quarters, or private households. Group quarters -- collective dwellings -- are generally institutions and other group living arrangements such as rooming houses and boarding schools.

Institutions often retain persons under formal supervision or custody, such as correctional institutions, military barracks, asylums, or nursing homes. Educational and religious group dwellings (e.g., boarding schools, convents, monasteries, etc.) are also included in the institutional classification.

Group quarter designations are often useful for understanding the universe of households that answered questions about household characteristics. Censuses will often exclude group quarters from such questions.

description

DEFINITION

GQTYPEH reports the type of group quarters in selected historical samples.

With this variable, users can distinguish between institutions and non-institutional group quarters, identify broad categories of institutions (e.g., mental institutions versus correctional institutions), and, for some years, isolate very specific types of group quarters (e.g., old soldiers home).

concept

CONCEPT

HHWT: Household weight

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Continuous Decimal: 2 Width: 8 Range: - Format: Numeric

description

DEFINITION

HHWT indicates the number of households in the population represented by the household in the sample.

For the samples that are truly weighted (see the comparability discussion), HHWT must be used to yield accurate household-level statistics.

NOTE: HHWT has 2 implied decimal places. That is, the last two digits of the eight-digit variable are decimal digits, but there is no actual decimal in the data.

concept

CONCEPT

Imputation and derivation

DERIVATION

HHWT is an 8-digit numeric variable with 2 implied decimal places. See the variable description.

PERSONS: Number of person records in the household

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Continuous Width: 4 Range: - Format: Numeric

description

DEFINITION

PERSONS indicates how many person records are included in the household (i.e., the number of person records associated with the household record in the sample). These person records will all have the same serial number (SERIAL) as the household record. The information contained in the household record will normally apply to all of these persons.

concept

CONCEPT

Imputation and derivation

DERIVATION

PERSONS is a 4-digit numeric variable.

RECTYPE: Record type**Data file:** USA1880_PHC-10PCT-H-H**Overview**

Type: Continuous Width: 1 Range: - Format: character

Questions and instructions

CATEGORIES

Value	Category
H	Household
P	Person

description

DEFINITION

RECTYPE identifies the type of record for the case: household or person.

NOTE: RECTYPE is an alphabetic (character string) variable with a value of 'H' for household records and 'P' for person records. RECTYPE will not appear as a variable in the default rectangular extracts produced by the data extract system. It is only available in hierarchical extracts, to distinguish between the two record types.

description

DEFINITION

SAMPLE identifies the IPUMS sample from which the case is drawn. Each sample receives a unique 9-digit code. The code is structured as follows:

The first 3 digits are the ISO/UN codes used in COUNTRY

The next 4 digits are the year of the census/survey

The final 2 digits identify the sample within the year. For the last two digits, censuses or large census-like surveys have a value "0" (e.g., 01) in the second-to-last digit, household surveys have a value of "2" (e.g., 21), and employment surveys have a value of "4" (e.g., 41).

concept

CONCEPT

SERIAL: Household serial number

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Continuous Width: 12 Range: - Format: Numeric

description

DEFINITION

SERIAL is an identifying number unique to each household in a given sample. All person records are assigned the same serial number as the household record that they follow. (Person records also have their own unique identifiers -- see PERNUM.) The combination of SAMPLE and SERIAL provides a unique identifier for every household in the IPUMS-International database; SAMPLE, SERIAL and PERNUM uniquely identify every person in the database.

SERIAL can be used to identify dwellings in some samples. In these samples, the first 7 digits of SERIAL provide the dwelling number common to all households that were sampled from the same structure. The last three digits give the sequence of the household within the dwelling. The following is a list of samples in which dwellings can be inferred:

Chile 1970, 1992, 2002Colombia 1993, 2005Costa Rica 1984, 2000Cuba 2002Dominican Republic 1981, 2002, 2010Ecuador

1990, 2001Germany 1971Hungary 1980, 1990, 2001Jamaica 1982, 1991, 2001Malaysia 1970, 1991, 2000Mexico 1995, 1990, 2000, 2005Nigeria 2006Panama 2000Peru 1993, 2007Portugal 1981, 1991, 2001Spain 1991Uruguay 2011Venezuela 1990, 2001Vietnam 1989In all other samples, the last 3 digits are always zeroes.

SERIAL was constructed for IPUMS-International, and has no relation to the serial number in the original datasets.

The U.S. 1900 sample and 1880 10% sample have multi-household dwellings that can be identified using the last 3 digits of SERIAL.

concept

CONCEPT

Imputation and derivation

DERIVATION

SERIAL is a 10-digit numeric variable.

The last 3 digits of SERIAL indicate household number within dwelling for selected samples noted in the variable description. In all other samples, the last 3 digits are always zeroes.

UNREL: Number of unrelated persons

Data file: USA1880_PHC-10PCT-H-H

description

DEFINITION

CITYPOPH reports the population, in hundreds, for all incorporated municipalities in United States census datasets from 1850 to 1910. For the 1881 Canadian census, CITYPOPH is defined similarly as the population of incorporated places.

For the U.S. 1880 complete count census, CITYPOPH reports the population for all incorporated municipalities and for the portion of New England towns considered "urban" by the Census Bureau, as well as for a few other non-incorporated areas in other parts of the country. (See URBAN for discussion of how the U.S. Census Bureau defined the urban population.) See CITYH for identification of specific U.S. and Canadian cities.

Aggregate data for the 1880 complete count census for cities and counties is available in digital format for users with access to ICPSR, from datasets DS16, DS17, DS18, and DS48 in ICPSR File 02896. The original publications for the aggregate data are available to all users from the U.S. Census Bureau in PDF format. Publications from censuses other than 1880 are also available from the Census Bureau.

The source for Canadian city populations is Table I in the publication, *Census of Canada, 1880-81, Volume 1* (Ottawa: MacLean, Roger and Co. Printers, Wellington Street, 1882). A scanned copy of this table is available. It contains aggregate statistics for each Canadian census sub-district (SDSTCA) and district (DISTCA) on the number of

Dwellings, sub-divided into vessels, shanties, inhabited, uninhabited, and under construction

Families

Population, by sex

Married population, by sex

Widowed population, by sex

Children and unmarried population, by sex

Additionally, the scanned table reports the area in square miles, square kilometers, and acres for every Canadian district in 1881. The latter information is available in the variable CNTYAREAH. The final page of the document contains summary statistics for the provinces (GEO1_CA1852_1911) and the country for all the aforementioned variables.

concept

CONCEPT

COUNTYUS: United States, County

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Continuous Width: 4 Range: - Format: Numeric

description

DEFINITION

COUNTYUS identifies the household's county of enumeration using the Inter-University Consortium for Political and Social

Research (ICPSR) coding scheme. Counties are assigned codes alphabetically within states. The first 3 digits are identical to the FIPS county codes used in other datasets; ICPSR adds a digit to the FIPS codes to accommodate change over time. COUNTY allows the IPUMS-USA and IPUMS International pre-1950 data to be easily merged with ICPSR data. The variable also identifies areas that were not part of any county, including the independent cities of Virginia and some Indian lands.

For more information, see "ICPSR County Codes" on the IPUMS-USA website.

COUNTY is a state-dependent variable; it must be read in combination with the State variable (last two digits of GEO1_US) to distinguish between counties located in different states.

Note that many county boundaries and some county names changed over time. We have not attempted to impose a uniform county boundary system on the data, so a particular county listed for a particular year should be assumed to have the boundaries that it had in that year. GIS boundary files can be obtained from the IPUMS NHGIS site.

COUNTYUS is completely compatible with the IPUMS-USA variable COUNTY.

concept

CONCEPT

Imputation and derivation

DERIVATION

COUNTY is a 4-digit numeric variable.

CodesSee "ICPSR County Codes," on the IPUMS website under "Geographic Tools," Volume 2: User's Guide Supplement for county codes.

9999: Unknown

ENUMDIST: Enumeration district number, historical

description

DEFINITION

ENUMDIST identifies the number of the enumeration district in select United Kingdom, Norway and United States datasets.

In Norway, enumeration districts are contained within municipalities (which are identified in MUNICNO).

Enumerators for the 1875 Norwegian census sometimes used letters to distinguish between the enumeration districts. To make this variable numeric, we have converted the alphabetic suffix to numbers, so that A=1, B=2, C=3 and so forth. The last digit in this variable represents the suffix in the Norwegian enumeration district. For example, 0110 would mean the enumeration district had no alphabetic suffix, 0111 represents 011A, and 0113 represents 011C. The field is zero-filled for ships and for small towns. Enumeration districts without any suffix attached are also recorded in the unharmonized variable NO1975A_0011. There are no such suffixes for the 1865 sample.

In the United States, enumeration districts are unique within states. Users must read this variable in conjunction with the STATE variable (GEO1_US1850_1910) to distinguish among enumeration districts located in different states. Code "9999" indicates missing.

United States enumeration district numbers are four digits long and almost completely numeric, although the field occupies six columns. Users may reformat the variable as numeric as required. Codes 0000 and XXXX designate "Unknown."

United States enumeration district data in the IPUMS International pre-1950 samples are mostly compatible with the IPUMS-USA variable ENUMDIST. The IPUMS-USA version is numeric, whereas the IPUMS International pre-1950 samples version is mostly numeric, with a few exceptions. Users may consult the enumerator instructions (for example, the 1880 enumerator

instructions and the IPUMS procedural history of the U.S. census) for further detail on U.S. enumeration districts. Enumeration district maps are available from the National Archives and major research libraries.

description

DEFINITION

GEO1_US identifies the household's state within the United States in all sample years. States are the first level administrative units of the country. GEO1_US is spatially harmonized to account for political boundary changes across census years; see the comparability discussion. A GIS map (in shapefile format), corresponding to GEO1_US can be downloaded from the GIS Boundary files page in the IPUMS International web site.

The full set of geography variables for the United States can be found in the IPUMS International Geography variables list. For cross-national geographic analysis on the first and second major administrative level refer to GEOLEV1, and GEOLEV2. More information on IPUMS-International geography can be found here.

DEFINITION

GEO1_US1880 identifies the household's state within the United States in 1880. States are the primary level of geography for the United States. GEO1_US1880 harmonizes both the complete count and the 10 percent sample of the United States 1880.

Other geography variables from 1880 United States include, STATICUS, COUNTYUS, and METRO.

1	No one in household with any connection to agriculture
2	At least one household member works as farmer
3	At least one household member works as agricultural laborer
4	At least one household member works as a cottar
9	Unknown

description

DEFINITION

FARM indicates the connection of a household to agriculture. To accommodate differences in census enumeration practices and occupational structure, FARM is not constructed in the same way as FARMIPUM.

FARM classifies a household's connections to agriculture into four levels:

1: Nobody in the household indicates any connection with agriculture

2: At least one member of the household is a farmer, and the household's location meets the population [density] threshold. Farmers are identified by having an occupation in minor group 6-1 (See the OCCHISCO codes). If the only agricultural occupation(s) in the household were husbandmen or cottars (61115), the household did not receive this code. Husbandmen and cottars are found in Denmark, Norway, Sweden, and Iceland, and their residence was not always on a farm. For all full-count England and Wales datasets and for Scotland 1881, a parish population density threshold of 75 persons per acre was applied. For the two percent United Kingdom 1851 sample, a population density threshold of 64 persons per acre was applied. Households with farmers that were in locations with greater population [densities] were not given this code. Parish density information is not available in Scotland 1861, 1871, or 1891. FARM is defined based on occupation alone in these samples. 3: At least one member of the household was an agricultural laborer; or in Norway there was a cottar in the household, who had no other trade.

concept

FARMIPUM: Farm status, IPUMS historical

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
1	Non-farm
2	Farm

description

DEFINITION

FARMIPUM identifies farm households according to the IPUMS-USA definition. Any household containing a person with the occupation "farmer" is coded as a farm, including group quarters.

Farmers are identified as individuals with an OCCHISCO code between 61110 and 61400. In the United States, we also check if there is anyone in the household with an US1880A_0406 code of 100. For the two percent sample of United Kingdom 1851, we use the OCCUK code of 100.

Any household containing a farmer under these definitions is regarded as a farm. FARMIPUM does not require the household to be in a non-urban area. The variable FARM restricts farm status to non-urban areas only, based on the (URBAN) variable.

description

DEFINITION

METROUS indicates the household's census metropolitan area in the United States from 1850 to present. METROUS is harmonized by name and does not account for boundary changes over time.

Metropolitan areas are counties or combinations of counties centering on a substantial urban area. METROUS identifies the household's metropolitan area of enumeration if the household was located in a metropolitan area large enough to meet confidentiality requirements.

The full set of geography variables for the United States can be found in the IPUMS International Geography variables list. For cross-national geographic analysis on the first and second major administrative level refer to GEOLEV1 and GEOLEV2. More information on IPUMS-International geography can be found [here](#).

concept

CONCEPT

NCOUPLES: Number of married couples in household

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
	No married couples in household
1	1 couple
2	2 couples
3	3 couples
4	4 couples
5	5 couples
6	6 couples
7	7 couples
8	8 couples
9	9 or more couples

description

DEFINITION

NCOUPLES is a constructed variable indicating the number of married/in-union couples within a household.

NCOUPLES is constructed using the IPUMS-International pointer variable SPLOC (spouse's location in the household).

concept

CONCEPT

NFAMS: Number of families in household

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
	Vacant household
1	1 family
2	2 families

3	3 families
4	4 families
5	5 families
6	6 families
7	7 families
8	8 families
9	9 or more families

description

DEFINITION

NFAMS is a constructed variable that indicates the number of families within each household. Family membership is defined by FAMUNIT. A "family" is any group of persons related by blood, adoption, or marriage. An unrelated individual within the household is considered a separate family. Thus, a household consisting of a widow and a domestic employee contains two families; a household consisting of a large, multi-generation extended family with no persons unrelated to the head counts as a single family.

NFAMS is constructed from information in RELATE (relationship to head) and from the constructed pointer variables SPLOC, MOMLOC, and POPLOC (location of spouse, mother, and father). See those variable descriptions for more detail.

concept

CONCEPT

NHGISJOIN: United States, County GIS identifier

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Continuous Width: 7 Range: - Format: Numeric

description

DEFINITION

NHGISJOIN is a county identifier that can be used to match IPUMS International pre 1950 data with the county-level boundary files and aggregate data from the National Historical Geographic Information System (NHGIS). The corresponding variable in NHGIS is called "GISJOIN2."

Researchers can use this variable to match IPUMS International pre 1950 data with NHGIS boundary files (to make maps) or to match NHGIS county-level data with NAPP microdata for the United States (to facilitate multi-level analysis). For user convenience, copies of the NHGIS boundary files are available on the IPUMS County Codes page. NHGIS aggregate data are available via the "Data Finder" link on the front page of the NHGIS homepage.

concept

CONCEPT

Imputation and derivation

DERIVATION

CodesNHGISJOIN is a 7-digit numeric variable.

A small number of cases in NAPP cannot be matched to the NHGIS. These are coded as 9999999 in NHGISJOIN. These were non-county areas such as Indian reservations and military installations. There were 6 such counties in 1900 and 1 in 1910.

A small number of counties in NHGIS cannot be matched to NAPP data for the United States. In all cases, these were very small counties that were not captured by the IPUMS sampling procedures. All of these counties contained fewer than 1,000 people; many were administrative areas with no population at all. There were 9 such counties in 1850, 56 in 1860, 32 in 1870, 33 in 1880, 2 in 1900 and 1910, and none in 1920 and 1930.

NMOTHERS: Number of mothers in household

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
	No mothers in household
1	1 mother
2	2 mothers
3	3 mothers
4	4 mothers
5	5 mothers
6	6 mothers
7	7 mothers
8	8 mothers
9	9 or more mothers in household

description

DEFINITION

NMOTHERS is a constructed variable indicating the number of mothers -- of persons of any age -- within a household.

NMOTHERS is constructed using the IPUMS-International pointer variable MOMLOC (mother's location in the household).

concept

CONCEPT

REEL: Microfilm reel number**Data file:** USA1880_PHC-10PCT-H-H**Overview**

Type: Continuous Width: 6 Range: - Format: Numeric

description

DEFINITION

REEL reports the microfilm reel number. For each sample, REEL can be used in conjunction with PAGENUM to locate the case on a microfilmed version of the original census form.

concept

CONCEPT

Imputation and derivation

DERIVATION

REEL is a 6-digit numeric variable.

SEAUS: United States, State Economic Area**Data file:** USA1880_PHC-10PCT-H-H**Overview**

Type: Discrete Width: 3 Range: - Format: Numeric

description

DEFINITION

SEAUS stands for State Economic Area, a concept described fully in Donald J. Bogue, *State Economic Areas*, (Washington D.C., 1951). SEAs are generally either single counties or groups of contiguous counties within the same state that had similar economic characteristics when they were originally defined prior to the 1950 census.

concept

CONCEPT

HEADLOC: Head's location in household**Data file:** USA1880_PHC-10PCT-H-H

Overview

Type: Continuous Width: 3 Range: - Format: Numeric

description

DEFINITION

HEADLOC gives the person number (PERNUM) of the head of household in samples in which persons are organized into households.

concept

CONCEPT

Imputation and derivation

DERIVATION

HEADLOC is a 3-digit numeric variable.

NFATHERS: Number of fathers in household

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
	No fathers in household
1	1 father
2	2 fathers
3	3 fathers
4	4 fathers
5	5 fathers
6	6 fathers
7	7 fathers
8	8 fathers
9	9 or more fathers in household

description

DEFINITION

NFATHERS is a constructed variable indicating the number of fathers -- of persons of any age -- within a household.

NFATHERS is constructed using the IPUMS-International pointer variable POPLOC (father's location in the household).

concept

CONCEPT

PRMFAMSZ: Size of primary family, historical

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Continuous Width: 4 Range: - Format: Numeric

description

DEFINITION

PRMFAMSZ is the size of the primary, or first, family in the household. It is the FAMSIZE of the first family unit (FAMUNIT) recorded in the household.

PRMFAMSZ and FAMSIZE are constructed from information in RELATE (relationship to head of household) and from the constructed pointer variables SPLOC, MOMLOC, and POPLOC (location of spouse, mother, and father).

Note: Users should be aware that in the United States census of 1880, where relationship to the head was not transcribed for non-relatives, FAMSIZE and PRMFAMSZ may be inaccurate in some cases.

concept

CONCEPT

Imputation and derivation

DERIVATION

PRMFAMSZ is a 4-digit numeric variable.

SERVANTS: Number of servants in household, historical

Data file: USA1880_PHC-10PCT-H-H

Overview

Type: Discrete Width: 3 Range: - Format: Numeric

description

DEFINITION

SERVANTS is a constructed variable that indicates the number of servants in the household, who are not related to the household head but are likely to be working in the household.

SERVANTS was constructed uniformly for all pre-1950 samples, based on information in RELATE and occupation (OCCHISCO or OCC50US). Specifically, in all countries SERVANTS counts the number of people in the household who meet the following conditions: 1) their relationship to head was non-relative and their occupation indicated they were a servant; 2) an occupation response other than servant but a relationship code of servant; 3) an occupation of servant and a surname different from the head of household (for samples that lack relationship-to-head information).

The variable SERVANTS is top-coded at 99.

description

DEFINITION

This variable indicates the subsample number of the household randomly numbered from 0 to 99. Each subsample is nationally representative and preserves all stratification of the sample from which it is drawn.

This variable is a useful tool for carrying out the "subsample replicate" method of standard error estimation. This method involves dividing an IPUMS sample into 100 random subsamples and generating 100 subsample estimates for a given statistic. With these 100 "subsample replicate" estimates, researchers can measure a statistic's variation across all of the subsamples. Due to Census sample designs this method yields a more precise estimate of the standard error of a sample statistic than would be achieved through the application of a theoretical standard error formula.

description

DEFINITION

This variable indicates the metropolitan area where the household is located. Metropolitan area is constructed using the 1950 census definition of Metropolitan Statistical Area (MSA). In 1950, the SMA is a county or group of contiguous counties that contained at least one city of 50,000+ residents.

In order to be part of an SMA, a county either had to contain the central city, or had to be metropolitan in character and integrated with the central city. In order to be considered metropolitan in character, a county had to either contain 10,000 nonagricultural laborers, or contain at least one-tenth as many nonagricultural workers as worked in the county containing the central city of the SMA, or contain 50+ percent of its population in minor civil divisions that had a population density of 150+ persons per square mile and were contiguous to the central city, and have at least 2/3 of its employed residents working in nonagricultural occupations. For integration with the central city at least 25 percent of the county population would have resided in the central city of the metropolitan area.

1	Rural
2	Urban

description

DEFINITION

This variable indicates if the household's location was urban or rural. The urban area is made up for the most part of households in cities and incorporated places with 2,500+ inhabitants. It also includes households in New Hampshire, Massachusetts, and Rhode Island towns (townships) containing a village or thickly settled area of 2,500 or more inhabitants and comprising, either by itself or when combined with other villages within the same town, more than 50 percent of the total population of the town. Also includes townships and other political subdivisions (not incorporating municipalities) with a total population of 10,000 or more and a population density of 1,000 or more per square mile.

1	Households under 1970 definition
2	Additional households under 1990 definition
3	Institutions

4	Other group quarters
6	Fragment

description

DEFINITION

This variable indicates the group quarter status of the household. Group quarters are largely institutions and other group living arrangements, such as rooming houses and military barracks that include units with 10 or more individuals unrelated to the householder .

This variable also identifies fragments. Fragments are individuals or groups of individuals who were enumerated separately from their household or group quarters. Most often this occurred when, at the end of a district, an enumerator added the names of individuals who had been missed. For these individuals, the unit's status as household versus group quarters cannot be classified. Non-inmates living in institutions are coded into "institution" category.

Questions and instructions

LITERAL QUESTION

Schedule 1: Free Inhabitants in ____, in the County of ____, State of ____, enumerated by me, on the ____day of ____, 1880.</p>

<p>____, Enumerator.

description

DEFINITION

This variable indicates the incorporated municipality code of the area of enumeration of the household. The coding scheme generally follows the Federal Information Processing Standards (FIPS).The coding of this variable was based on a listing of codes used for the 1990 U.S. census. The codes must be read in combination with one of the state variables (US80B016 or

US80B017) and the county variable US80B018.

LITERAL QUESTION

Schedule 1: Free Inhabitants in ____, in the County of ____, State of ____, enumerated by me, on the ____ day of ____, 1880.</p>

<p> ____, Enumerator.

description

DEFINITION

This variable indicates the State Economic Area (SEA). SEA are generally either single counties or groups of contiguous counties within the same state that have similar economic characteristics.

SEAs have been constructed by combining counties to match, as closely as possible, the components of the 1940-1950 SEAs, when the SEAs were originally defined. However, shifts in county boundaries, primarily resulting from the creation of new counties as populations shifted and grew, mean that these earlier SEAs do not always contain exactly the same territory as their 1940-1950 counterparts.

description

DEFINITION

This variable indicates the urbanized area of enumeration of the household. "Urbanized areas" are concentrations of at least 50,000 people consisting of a central city and the surrounding, closely-settled contiguous urban fringe. Urbanized areas have a population density of at least 1,000 persons per square mile, though small pockets of land within them (such as industrial parks or railroad yards) may be less densely settled.

Overview

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
	NIU (not in universe)
1	1 generation
2	2 generations
3	3 generations

description

DEFINITION

This variable identifies the number of distinct generations in the the household. The number of generations was identified in two ways. First, relationships to the householder as identified by US80B424 were divided into the following generational categories (general codes only):

- (1) Parent, Parent-in-law
- (2) Householder, Spouse, Sibling, Sibling-in-law
- (3) Child, Child-in-law
- (4) Grandchild

The number of generations is simply the number of these categories represented in the household.

Second, the family interrelationship pointer variables were examined to provide additional information on "other relatives" and nonrelatives of the householder. For example, two generations exist when someone is linked to a parent as identified by US80B407 and US80B403 ; three generations exist when that parent also has a parent in the household.

MOMLOC: Mother's location in household**Data file:** USA1880_PHC-10PCT-P-H**Overview**

Type: Continuous Width: 3 Range: - Format: Numeric

description

DEFINITION

MOMLOC is a constructed variable that indicates whether or not the person's mother lived in the same household and, if so, gives the person number of the mother (see PERNUM). MOMLOC makes it easy for researchers to link the characteristics of children and their (probable) mothers.

The method by which probable child-mother links are identified is described in PARRULE.

The general design of MOMLOC and other constructed variables follows the methods developed for IPUMS-USA "Family Interrelationships," but the details vary significantly. For more details on the construction of MOMLOC, see the Comparability section of PARRULE and this paper on IPUMSI family linking methodology.

Note: MOMLOC identifies social relationships (such as stepmother and adopted mother) as well as biological relationships. The variable STEPMOM is designed to identify some of these social relationships. To restrict MOMLOC to biological mothers, such as for own children fertility estimation, MOMLOC should be reset to zero when STEPMOM is greater than zero.

concept

CONCEPT

Imputation and derivation

DERIVATION

MOMLOC is a 3-digit numeric variable.

Codes0 = No mother of this person present in the household.
1 or higher = The person number of this person's mother

MOMRULEH: Rule for linking mother (historical)**Data file:** USA1880_PHC-10PCT-P-H**Overview**

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
	No mother link
1	Unambiguous mother link

2	Daughter/grandchild/greatgrandchild link
3	Ambiguous mother link
7	Spouse of father becomes stepmother

description

DEFINITION

MOMRULEH explains the criteria by which the variable MOMLOC linked the person to a probable mother in pre-1950 datasets.

Pre-1950 datasets in IPUMS International establish child-mother links according to four basic rules, and MOMRULEH gives the number of the rule that applied to the link in question. MOMRULEH works the same way for all countries. A lower-numbered rule (greater than 0) takes precedence over a higher numbered rule. The codes for MOMRULEH are as follows:

0 = No mother of this person present in the household.

1 = Unambiguous relationship. This rule covers four basic cases, and occurs when the person linked is 10 to 69 years younger than the probable parent. All relationship pairings are not available in every sample. The allowable relationship pairings are as follows:

Child linked to head or spouse/unmarried partner of the head
Head or sibling linked to parent
Spouse or sibling-in-law linked to parent-in-law
Child/child-in-law linked to head or spouse
2 = Grandchildren. Potential mothers are females listed as child or child-in-law in RELATE who are 13-49 years older than persons listed as grandchildren and who share the grandchild's surname. If there is more than one potential mother, we used relative positions in the household, age and marital status to decide the link.

3 = Other relatives and non-relatives. Link to a preceding person with a plausible relationship pairing of child-to-mother, where the mother is 13- 49 years older, is ever-married, and shares the child's surname. The mother must immediately precede the child or all intervening persons must also be linked to the mother as spouse or child. No links are made for non-relatives over age 17. Permissible relationship pairings are as follows (child to mother):

Nephew/niece to sibling or sibling-in-law
Cousin to aunt/uncle
Other relative to sibling
Grandchild to other relative
Other relative to other relative (RELATEH code 1000, 1001, 1061)
Non-relative to non-relative (RELATEH code 1100-1303)
7= If the child is already linked to a father (see POPLOC and POPRULEH), and that father has a wife present in the household who has not been linked to the child by another rule, the wife is linked to the child as a stepmother, regardless of the age gap between child and the stepmother.

Consistency checks: If a husband and wife were both linked to the same mother, historic samples chose the best mother link based on detailed relationship (RELATEH) and proximity within the household. If a person is linked to two parents who are not linked to each other, remove one of the parental links on the basis of proximity within the household.

concept

CONCEPT

PERNUM: Person number

Data file: USA1880_PHC-10PCT-P-H

Overview

Type: Continuous Width: 4 Range: - Format: Numeric

description

DEFINITION

PERNUM numbers all persons within each household consecutively (starting with "1" for the first person record of each household). When combined with SAMPLE and SERIAL, PERNUM uniquely identifies each person in the IPUMS-International database.

concept

CONCEPT

Imputation and derivation

DERIVATION

PERNUM is a 4-digit numeric variable.

PERWT: Person weight

Data file: USA1880_PHC-10PCT-P-H

Overview

Type: Continuous Decimal: 2 Width: 8 Range: - Format: Numeric

description

DEFINITION

PERWT indicates the number of persons in the actual population represented by the person in the sample.

For the samples that are truly weighted (see the comparability discussion), PERWT must be used to yield accurate statistics for the population.

NOTE: PERWT has 2 implied decimal places. That is, the last two digits of the eight-digit variable are decimal digits, but there is no actual decimal in the data.

concept

CONCEPT

Imputation and derivation

DERIVATION

PERWT is an 8-digit numeric variable with 2 implied decimal places. See the variable description.

POPLOC: Father's location in household

Data file: USA1880_PHC-10PCT-P-H

Overview

Type: Continuous Width: 3 Range: - Format: Numeric

description

DEFINITION

POPLOC is a constructed variable that indicates whether or not the person's father lived in the same household and, if so, gives the person number of the father (see PERNUM). POPLOC makes it easy for researchers to link the characteristics of children and their (probable) fathers.

The method by which probable child-father links are identified is described in PARRULE.

The general design of POPLOC and other constructed variables follows the methods developed for IPUMS-USA "Family Interrelationships," but the details vary significantly. For more details on the construction of POPLOC, see the Comparability section of PARRULE and this paper on IPUMSI family linking methodology.

Note: POPLOC identifies social relationships (such as stepfather and adopted father) as well as biological relationships. The variable STEPPPOP is designed to identify some of these social relationships. To restrict POPLOC to biological mothers, such as for own children fertility estimation, POPLOC should be reset to zero when STEPPPOP is greater than zero.

2	Son/granchild/greatgrandchild link
3	Ambiguous father link
7	Husband of mother becomes stepfather

description

DEFINITION

POPRULEH explains the criteria by which the variable POPLOC linked the person to a probable father in pre-1950 datasets.

In the pre-1950 datasets, child-father links were established according to four basic rules, and POPRULEH gives the number of the rule that applied to the link in question.

POPRULEH works the same way for all countries. A lower-numbered rule (greater than 0) takes precedence over a higher numbered rule. The codes for POPRULEH are as follows:

0 = No father of this person present in the household.

1 = Unambiguous relationship. This rule covers four basic cases, and occurs when the person linked is 10 to 69 years younger than the probable parent. All relationship pairings are not available in every sample. The allowable relationship pairings are as follows:

Child linked to head or spouse/unmarried partner of the head
 Head or sibling linked to parent
 Spouse or sibling-in-law linked to parent-in-law
 Child/child-in-law linked to head or spouse
 2 = Grandchildren. Potential fathers are males listed as child or child-in-law in RELATE 13-79 years older than persons listed as grandchildren and who share the grandchild's surname. If there is more than one potential father, we used relative positions in the household, age and marital status to decide the link.

3 = Other relatives and nonrelatives. Link to a preceding person with a plausible relationship pairing of child-to-father, where the father is 13-79 years older, is ever-married, and shares the child's surname. The father must immediately precede the child or all intervening persons must also be linked to the father as spouse or child. Permissible relationship pairings are as follows (child to father):

Nephew/niece to sibling or sibling-in-law
 Cousin to aunt/uncle
 Other relative to sibling
 Grandchild to other relative
 Other relative to other relative (RELATEH code 1000, 1001, 1061)
 Non-relative to non-relative (RELATEH code 1100-1303)
 7 = If a child is linked to a mother (see MOMLOC and MOMRULEH), and that mother is linked to a husband who has not been linked to the child by another rule, the husband is linked to the child as a stepfather, regardless of the age gap between child and husband.

Consistency checks: If a husband and wife were both linked to the same father, the best father link was chosen based on detailed relationship (RELATEH) and proximity within the household. If a person is linked to two parents who are not linked to each other, remove one of the parental links on the basis of proximity within the household.

concept

CONCEPT

SPLOC: Spouse's location in household

Data file: USA1880_PHC-10PCT-P-H

Overview

Type: Continuous Width: 3 Range: - Format: Numeric

description

DEFINITION

SPLOC is a constructed variable that indicates whether or not the person's spouse lived in the same household and, if so, gives the person number (PERNUM) of the spouse. SPLOC makes it easy for researchers to link the characteristics of (probable) spouses.

The method by which probable spouse-spouse links are identified is described in SPRULE.

The general design of SPLOC and other constructed variables is modeled on the methods developed for IPUMS-USA "Family Interrelationships", but the details vary significantly. For more details on the construction of SPLOC, see the Comparability section of SPRULE and this paper on IPUMSI family linking methodology.

concept

CONCEPT

Imputation and derivation

DERIVATION

SPLOC is a 3-digit numeric variable.

Codes0 = No spouse of this person present in the household.
1 or higher = The person number of this person's spouse

SPRULEH: Rule for linking spouse (historical)

Data file: USA1880_PHC-10PCT-P-H

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
	No spouse link
1	Unambiguous adjacent link
2	Unambiguous non-adjacent links -- consistent relationship to head/age differences
3	Weak relationship pairing -- adjacent links
4	Weak relationship pairing -- non-adjacent links

description

DEFINITION

SPRULEH explains the criteria by which the variable SPLOC linked the person to a probable spouse for the pre-1950 datasets.

Spouse-spouse links are established according to four basic rules, and SPRULEH gives the number of the rule that applied to the link in question.

SPRULEH works the same way for all countries. In all countries both partners are required to be age 12 and older and to either have a marital status of married or be the unmarried partner of the household head (see MARST and RELATEH). In addition, both partners were required to share the same surname, except when linking heads to spouses or in the Scandinavian samples where SURSIM does not capture family relationships (e.g. patronymic surnames in Norway and non-reporting of child surnames in Sweden). In some samples, however, we were compelled to customize the links beyond what

could be implemented more generally.

The codes for SPRULEH are as follows. A lower-numbered rule (greater than 0) takes precedence over a higher numbered rule. All relationship pairings are not available in every sample. Additional conditions were added to the rules for some samples.

0 = No spouse of this person present in household.

1 = A married/in-union woman and a married/in-union man were linked because she immediately followed or preceded him in the dataset and both persons' relationship to the household head (see RELATEH) justified a link, as follows:

Head to spouse
 Unmarried partner to spouse
 Parent to parent
 Parent-in-law to parent-in-law
 Child to child-in-law
 Sibling to sibling-in-law
 2 = A married woman and a married man who did not appear adjacently on the form were linked because: they had one of the relationship sets listed in rule 1
 the woman was at least 13 years old
 the man was at least 15 years old
 the man was not more than 25 years older than the woman, AND
 the woman was not more than 10 years older than the man.
 3 = A married/in-union woman and a married/in-union man were linked because she immediately followed or preceded him in the dataset and both persons' relationship to the household head (RELATEH) suggested a possible pairing and the female spouse was no more than 10 years older or 25 years younger than the male spouse. The possible relationship pairings are as follows:

Other relative to other relative (RELATEH codes 1000, 1001, 1061)
 Non-relative to non-relative (RELATEH codes 1000-1303)
 Child to other relative
 Sibling to other relative
 Grandchild to grandchild-in-law
 Grandparent to grandparent-in-law
 Grandparent-in-law to grandparent-in-law
 Grandchild to other relative
 Aunt to uncle
 Nephew/niece to nephew/niece
 Cousin to cousin
 Unknown to unknown; missing to missing
 Head to unknown or missing
 Child to unknown or missing
 4 = Same as rule 3, but the married/in-union woman was not adjacent to the married/in-union man in the data.

concept

CONCEPT

STEPMOMH: Probable stepmother (historical)

Data file: USA1880_PHC-10PCT-P-H

Overview

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
	No stepmother present
1	Improbable age difference
2	Spouse of father
3	Identified stepmother
5	Identified as adopted

description

DEFINITION

STEPMOMH indicates for the pre-1950 datasets whether a person's mother, as identified by MOMLOC, was most probably not the person's biological mother. Non-zero values of STEPMOMH explain why it is probable that the person's mother was a

step- or adopted mother. A value of 0 indicates no likely stepmother because (1) the mother identified in MOMLOC was probably the biological mother or (2) there is no mother of this person present in the household. Only persons under age 19 are linked to their mothers.

The codes for STEPMOMH are as follows:

0 = Biological mother or no mother of this person present in household.

1 = Age difference between mother and child was less than 12 or greater than 54 years.

2 = Link was established only because the mother was married to father.

3 = Child explicitly identified relationship as stepchild.

5 = Child explicitly identified as adopted.

If more than one value applied to the case, the lowest value was assigned.

See MOMRULEH for a description of the linking process.

Users should note that there are many stepmothers and adopted mothers in the population that cannot be identified with information available in the censuses. Therefore, STEPMOMH will always under-represent their actual number in the population.

concept

CONCEPT

STEPPOPH: Probable stepfather (historical)

Data file: USA1880_PHC-10PCT-P-H

Overview

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
	No stepfather present
1	Improbable age difference
2	Spouse of mother
3	Identified stepfather
5	Identified as adopted

description

DEFINITION

STEPPOPH indicates for the pre-1950 datasets whether a person's father, as identified by POPLOC, was most probably not the person's biological father. Non-zero values of STEPPOPH explain why it is probable that the person's father was a step- or adopted father. A value of 0 indicates no likely stepfather because (1) the father identified in POPLOC was probably the biological father or (2) there is no father of this person present in the household. Only persons under age 19 are linked to

their fathers.

The codes for STEPPOPH are as follows:

0 = Biological father or no father of this person present in household.

1 = Age difference between father and child was less than 14 years.

2 = Link was established only because the father was married to mother.

3 = Explicitly identified relationship (stepchild).

5 = Explicitly identified relationship (adopted).

If more than one value applied to the case, the lowest value was assigned.

See POPRULEH for a description of the linking process.

Users should note that there are many stepfathers and adopted fathers in the population that cannot be identified with information available in the censuses. Therefore, STEPPOPH will always under-represent their actual number in the population.

description

DEFINITION

FAMSIZE counts the number of the person's own family members living in the household with her/him, including the person her/himself. These include all persons related to the person by blood, adoption, or marriage as indicated by the census forms or inferred from them.

FAMSIZE is calculated from the units identified in the IPUMS constructed variable FAMUNIT (family unit membership). The primary family is defined as all persons related to the head in the RELATE variable. Secondary families are individuals or groups of persons linked together by the IPUMS constructed pointer variables SPLOC, MOMLOC, and POPLOC (location of spouse, mother, and father).

concept

CONCEPT

FAMUNIT: Family unit membership

Data file: USA1880_PHC-10PCT-P-H

Overview

Type: Continuous Width: 4 Range: - Format: Numeric

description

DEFINITION

FAMUNIT is a constructed variable indicating to which family within the household a person belongs.

All persons related to the household head receive a 1 (see RELATE). Each secondary family or secondary individual receives a higher code. For purposes of FAMUNIT, secondary families are individuals or groups of persons linked together by the IPUMS constructed pointer variables SPLOC, MOMLOC, and POPLOC (location of spouse, mother, and father).

concept

CONCEPT

Imputation and derivation

DERIVATION

FAMUNIT is a 4-digit numeric variable.

CodesIf there is only one group of related individuals within the household, all of them will be coded "1;" if there is a second, separate such group listed on the form, all of them will be coded "2," and so on.

description

DEFINITION

NUMGEN describes the number of generations in a given family unit. (See the documentation for FAMUNIT).

For example, a family unit comprised of parents and children has a NUMGEN of 2. A family unit which has co-resident grandparents, parents and children has a NUMGEN of 3. A family unit with only grandparents and grandchildren has a NUMGEN of 2, as the intervening generation is not resident.

CATEGORIES

Value	Category
	NIU (not in universe)
1	Single/never married
2	Married/in union
3	Separated/divorced/spouse absent
4	Widowed
9	Unknown/missing

description

DEFINITION

MARST describes the person's current marital status according to law or custom. Individuals who remarried should report the status relevant to their most recent marriage. Census instructions rarely explicitly limit marital status to strictly legal unions.

Note regarding universe: The lowest age at which a person can be anything but "never married" varies among samples.

description

DEFINITION

RELATEH is the NAPP version of the RELATE variable, which describes an individual's relationship to the head of household. This variable is largely compatible with the IPUMS-International variable RELATE, though some changes have been made.

The relationship codes are divided into two categories-relatives (codes 1- 10) and non-relatives (codes 11-12). The codes for relatives are self- explanatory. The non-relative codes are divided into three groups: "Partner, friend, visitor", roughly described as persons who do not pay or work for their accommodations (unless they share ownership); "Other non-relatives", including those persons paying or working for accommodations; and "Institutional inmates".

description

DEFINITION

FBPL indicates the country where the person reported his/her father was born. For Canada 1891 and United States 1880a, province of birth in Canada is reported for some records. For details on the United States birthplaces, refer to variable FBPLUS

The codes for FBPL are the same as BPLCNTRY, and are compatible with IPUMS birthplace variables.

description

DEFINITION

Race identifies the racial group with which a person identified himself or herself, or to which an enumerator assigned them. Determinations of race are based largely on appearance or ancestral place of origin.

description

DEFINITION

IND95US provides a consistent classification of industry across U.S. samples and the 1891 and 1911 censuses of Canada. Industry describes the type of goods or services produced by the place in which a person worked.

Note regarding universe: "New workers" are persons seeking employment for the first time who had not yet secured their first job.

CONCEPT

LABFORCE: Labor force participation

Data file: USA1880_PHC-10PCT-P-H

Overview

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
1	No, not in the labor force
2	Yes, in the labor force
8	Unknown
9	NIU (not in universe)

description

DEFINITION

LABFORCE is a dichotomous variable identifying whether a person participated in the labor force. Labor force participation generally means working or seeking work within a specified reference period.

For most samples LABFORCE is a recode of EMPSTAT (employment status). A consistent lower age universe of 15 or older has been applied to increase comparability across samples. Full detail is retained in EMPSTAT, which should be used for any

study of child labor.

concept

CONCEPT

LIT: Literacy

Data file: USA1880_PHC-10PCT-P-H

Overview

Type: Discrete Width: 1 Range: - Format: Numeric

Questions and instructions

CATEGORIES

Value	Category
	NIU (not in universe)
1	No, illiterate
2	Yes, literate
9	Unknown/missing

description

DEFINITION

LIT indicates whether or not the respondent could read and write in any language. A person is typically considered literate if he or she can both read and write. All other persons are illiterate, including those who can either read or write but cannot do both.

description

DEFINITION

OCCISCO records the person's primary occupation, coded according to the major categories in the International Standard Classification of Occupations (ISCO) scheme for 1988. For someone with more than one job, the primary occupation is typically the one in which the person had spent the most time or earned the most money.

concept

CONCEPT

OCCSTRNG: Occupation as transcribed

Data file: USA1880_PHC-10PCT-P-H

Overview

Type: Continuous Width: 30 Range: - Format: character

description

DEFINITION

OCCSTRNG is an alphabetic variable that preserves the transcription of an individual's response to questions about their occupation. Although the various occupation and industry codes preserve significant detail on occupation and industry, much variation exists in the occupational strings.

OCCSTRNG will primarily be of interest to researchers who are linking census data to other sources, or are investigating occupations at a much more detailed level than offered by the various coding schemes.

The collection of occupation information was extensively covered in the instructions to enumerators. Researchers who are interested in OCCSTRNG should also read the enumerator instructions for assistance in interpreting occupational responses.

Because of the size of this variable (30 columns), users should not select this variable unless it is essential for their research. Users should be aware that some responses are truncated at this length.

concept

CONCEPT

Imputation and derivation

DERIVATION

OCCSTRNG is a 30-character string variable.

OCSCORUS: Occupational income score, United States**Data file:** USA1880_PHC-10PCT-P-H**Overview**

Type: Continuous Width: 2 Range: - Format: Numeric

description

DEFINITION

OCSCORUS is a constructed variable that assigns occupational income scores to each occupation on the basis of OCC50US. The construction of this variable is described in the IPUMS USA documentation, Chapter 4, "Occupation Codes and Income Scores", which users should read before using this variable. In essence, OCSCORUS assigns each occupation in all years a value representing the median total income (in hundreds of 1950 dollars) of all persons with that particular occupation in 1950. That is, it provides a continuous measure of occupations according to the economic rewards enjoyed by people working at them in 1950.

concept

CONCEPT

Imputation and derivation

DERIVATION

OCSCORUS is a 2-digit numeric variable.

SEIUS: Duncan Socioeconomic Index, United States

Data file: USA1880_PHC-10PCT-P-H

Overview

Type: Continuous Width: 2 Range: - Format: Numeric

description

DEFINITION

SEIUS is a constructed variable that assigns a Duncan Socioeconomic Index (SEI) score to each occupation. The SEI, based on the 1950 occupational classification system, is a measure of occupational status based upon the income level and educational attainment associated with each occupation in 1950. The score was derived by using median income and education levels for men in 1950 to predict prestige assessments from a 1947 survey (of a select group of occupations). The resulting statistical model was used to generate scores for the entire range of 1950 occupations. See O. D. Duncan, "A Socioeconomic Index for All Occupations," in A. Reiss et al., *Occupations and Social Status* (Free Press, 1961).

description

DEFINITION

SURSIM assigns the same code to all persons within each household who had the same surname. Persons coded 1, including the household head, had the same surname as the household head. Other surnames are assigned codes in the order in which they appear within the household on the census form. Persons within a household who shared a surname will have the same code for this variable.
