## Identification

SURVEY ID NUMBER  
MMR\_2024\_RMS\_v01\_M

TITLE  
Results Monitoring Survey 2024

ABBREVIATION OR ACRONYM  
RMS 2024

COUNTRY

Name	Country code
Myanmar	MMR

STUDY TYPE  
Other Household Survey [hh/oth]

ABSTRACT  
UNHCR engaged its partner, IMPACT Initiatives, to conduct the Results Monitoring Survey (RMS) in Myanmar as part of its broader approach to monitoring and evaluating the impact of interventions for populations of concern, including refugees, internally displaced people and stateless individuals. The RMS is a standardized survey designed to assess living conditions, protection risks and overall well-being across different geographic contexts, covering both directly and indirectly assisted populations. Findings from the RMS inform UNHCR's operational planning by highlighting key challenges and emerging needs, supporting timely and rights-based responses. The survey also contributes to strategic planning and advocacy, in line with UNHCR's multi-year objectives, and strengthens accountability to affected populations and other stakeholders.

KIND OF DATA  
Sample survey data [ssd]

UNIT OF ANALYSIS  
Households

## Version

VERSION DESCRIPTION  
Version 2.1: Edited, cleaned and anonymised data

VERSION DATE  
2024-12-31

## Scope

NOTES  
The survey assesses needs of the interviewed across multiple sectors, including:

1. Household roster and mobility history
2. IDP and Returnee identification
3. Housing, energy and WASH facilities
4. Social protection, assistance and childcare.
5. Employment and financial inclusion
6. AAP

TOPICS

Topic
Education

Health
Water Sanitation Hygiene
Registration
Livelihood and Social cohesion

## Coverage

### UNIVERSE

Internally displaced people, IDP returnees, stateless people and host community in Myanmar 2024

## Producers and sponsors

UN Refugee Agency	UN

## Sampling

### SAMPLING PROCEDURE

Data collection was conducted using a structured, quantitative household survey. Stratified random sampling was applied for face-to-face interviews, while non-probability quota sampling was used for remote, phone-based data collection. This hybrid approach allowed the methodology to adapt to Myanmar's evolving security context, with remote surveys implemented in locations where in-person access was not feasible. Target sample sizes for each township were determined using population-estimate datasets covering the relevant states, regions, and sub-regions. In total, 2,930 interviews were completed, including 1,625 with internally displaced persons (IDPs), 1,193 with IDP returnees and 112 with non-displaced stateless individuals. Of these, 1,858 interviews were conducted in person and 1,072 remotely due to access constraints.

### WEIGHTING

Weights were calculated to adjust for differences in population sizes across various states, regions, and subregions for each population group.

## Data collection

### DATES OF DATA COLLECTION

Start	End
2024-11-08	2024-12-16

### DATA COLLECTION MODE

Face-to-face [f2f]

### DATA COLLECTION NOTES

Data collection modality was face-to-face where access allowed, and remote telephone surveys where there was no access.
